Principal Component Neural Networks K. I. Diamantaras,S. Y. Kung,1996-03-08 Systematically explores the relationship between principal component analysis PCA and neural networks Provides a synergistic examination of the mathematical algorithmic application and architectural aspects of principal component neural networks Using a unified formulation the authors present neural models performing PCA from the Hebbian learning rule and those which use least squares learning rules such as back propagation Examines the principles of biological perceptual systems to explain how the brain works Every chapter contains a selected list of applications examples from diverse areas **Principal Component Analysis Networks and Algorithms** Xiangyu Kong,Changhua Hu,Zhansheng Duan,2017-01-09 This book not only provides a comprehensive introduction to neural based PCA methods in control science but also presents many novel PCA algorithms and their extensions and generalizations e g dual purpose coupled PCA GED neural based SVD algorithms etc It also discusses in detail various analysis methods for the convergence stabilizing self stabilizing property of algorithms and introduces the deterministic discrete time systems method to analyze the convergence of PCA MCA algorithms Readers should be familiar with numerical analysis and the fundamentals of statistics such as the basics of least squares and stochastic algorithms Although it focuses on neural networks the book only presents their learning law which is simply an iterative algorithm Therefore no a priori knowledge of neural networks is required This book will be of interest and serve as a reference source to researchers and students in applied mathematics statistics engineering and other related fields

Connection Between Principal Component Analysis and Artificial Neural Networks Charles Andoh,2001 <u>Use of Principal Component Analysis for Data Reduction for Training Neural Networks</u> Glen Gray Paschal,1996 **Principal Component Analysis** I.T. Jolliffe,2006-05-09 Principal component analysis is central to the study of multivariate data Although one of the earliest multivariate techniques it continues to be the subject of much research ranging from new model based approaches to algorithmic ideas from neural networks It is extremely versatile with applications in many disciplines The first edition of this book was the first comprehensive text written solely on principal component analysis The second edition updates and substantially expands the original version and is once again the definitive text on the subject It includes core material current research and a wide range of applications Its length is nearly double that of the first edition Researchers in statistics or in other fields that use principal component analysis will find that the book gives an authoritative yet accessible account of the subject It is also a valuable resource for graduate courses in multivariate analysis The book requires some knowledge of matrix algebra Ian Jolliffe is Professor of Statistics at the University of Aberdeen He is author or co author of over 60 research papers and three other books His research interests are broad but aspects of principal component analysis have fascinated him and kept him busy for over 30 years **Expert Systems** Cornelius T. Leondes,2001-09-26 This six volume set presents cutting edge advances and applications of expert systems Because expert

systems combine the expertise of engineers computer scientists and computer programmers each group will benefit from buying this important reference work An expert system is a knowledge based computer system that emulates the decision making ability of a human expert The primary role of the expert system is to perform appropriate functions under the close supervision of the human whose work is supported by that expert system In the reverse this same expert system can monitor and double check the human in the performance of a task Human computer interaction in our highly complex world requires the development of a wide array of expert systems Expert systems techniques and applications are presented for a diverse array of topics including Experimental design and decision support The integration of machine learning with knowledge acquisition for the design of expert systems Process planning in design and manufacturing systems and process control applications Knowledge discovery in large scale knowledge bases Robotic systems Geograhphic information systems Image analysis recognition and interpretation Cellular automata methods for pattern recognition Real time fault tolerant control systems CAD based vision systems in pattern matching processes Financial systems Agricultural applications Medical diagnosis   Applications and Science of Neural Networks, Fuzzy Systems, and Evolutionary Computation ,1998   **Digital Neural Networks** Sun Yuan Kung,1993 Intended for engineers and researchers interested in the applications of neural networks to signal and image processing this book is theoretically based with emphasis on application and implementation Coverage includes neural networks for representation unsupervised networks for association classification neural networks for generalization restoration neural net and conventional optimization techniques and special purpose supercomputers for neural nets   **Threshold Accepting Trained Hybrid Principal Component Neural Networks for Pattern Classification** V. Ravi,2018 This paper proposes a new architecture for neural networks where the hidden layer is completely replaced by what is referred to as a principal component layer This layer consists of only a few selected principal components that perform the function of hidden nodes Then an algorithm based on the threshold accepting TA meta heuristic is suggested to train the hybrid principal component neural network PC NN The new architecture reduces the number of weights by a great number as there are no formal connections between the input layer and the principal component layer Further one needs to pre specify only two parameters that control the optimizer and the percentage variance explained which determines the number of principal components to be selected The algorithm is tested on wine classification and Wisconsin breast cancer problems The results showed better generalization power for the new algorithm compared to the backpropagation Also its performance is comparable to that of a TA based algorithm for the multilayer neural networks proposed elsewhere   **IEEE ...
