Readings In Unobserved Components Models:

Readings in Unobserved Components Models, 2005-04-07 This book presents a collection of readings which give the reader an idea of the nature and scope of unobserved components UC models and the methods used to deal with them It contains four parts three of which concern recent theoretical developments in classical and Bayesian estimation of linear nonlinear and non Gaussian UC models signal extraction and testing and one is devoted to selected econometric applications The first part focuses on the linear state space model the readings provide insight on prediction theory signal extraction and likelihood inference for non stationary and non invertible processes diagnostic checking and the use of state space methods for spline smoothing Part II deals with applications of linear UC models to various estimation problems concerning economic time series such as trend cycle decompositions seasonal adjustment and the modelling of the serial correlation induced by survey sample design The issues involved in testing in linear UC models are the theme of part III which considers tests concerned with whether or not certain variance parameters are zero with special reference to stationarity tests Finally part IV is devoted to the advances concerning classical and Bayesian inference for non linear and non Gaussian state space models an area that has been evolving very rapidly during the last decade paralleling the advances in computational inference using stochastic simulation techniques The book is intended to give a relatively self contained presentation of the methods and applicative issues For this purpose each part comes with an introductory chapter by the editors that provides a unified view of the literature and the many important developments that have occurred in the last years Readings in Unobserved Components Models Andrew C. Harvey, Tommaso Proietti, 2005 This volume presents a collection of readings which give the reader an idea of the nature and scope of unobserved components UC models and the methods used to deal with them The book is intended to give a self contained presentation of the methods and applicative issues Harvey has made major contributions to this field and provides substantial introductions throughout the book to form a unified view of the literature About the Series Advanced Texts in Econometrics is a distinguished and rapidly expanding series in which leading econometricians assess recent developments in such areas as stochastic probability panel and time series data analysis modeling and cointegration In both hardback and affordable paperback each volume explains the nature and applicability of a topic in greater depth than possible in introductory textbooks or single journal articles Each definitive work is formatted to be as accessible and convenient for those who are not familiar with the detailed primary literature **Volatility and Time Series Econometrics** Mark Watson, Tim Bollerslev, Jeffrey R. estate markets The central argument put forward is that growth and instability are inextricably linked and that building investment acts both as a key driver of growth and as the source of the most volatile cyclical fluctuations in an economy The role of building cycles in both economic growth and urban development is explored through a theoretical review and a comparative historical analysis of UK and US national data stretching back to the start of the nineteenth century together with a case study of the development of London since the start of the eighteenth century A simulation model of the building cycle is presented and tested using data for the City of London office market The analysis is then broadened to examine the operation of property cycles in global investment markets during the post war period focussing on their contribution to the diffusion of innovation the accumulation of wealth and the propagation of market instability Building Cycles growth instability concludes by synthesizing the main themes into a theoretical framework which can guide our understanding of the operation and impact of building cycles on the modern economy Postgraduate students on courses in property and in urban development as well as professional property researchers urban economists and planners will find this a stimulating read demanding but accessible
