Modeling The Earth System:

Modeling the Earth System, 1992 The 1990 Global Change Institute GCI on Earth System Modeling is the third of a series organized by the Office for Interdisciplinary Earth Studies to look in depth at particular issues critical to developing a better understanding of the earth system The 1990 GCI on Earth System Modeling was organized around three themes defining critical gaps in the knowledge of the earth system developing simplified working models and validating comprehensive system models This book is divided into three sections that reflect these themes Each section begins with a set of background papers offering a brief tutorial on the subject followed by working group reports developed during the institute These reports summarize the joint ideas and recommendations of the participants and bring to bear the interdisciplinary perspective that imbued the institute Since the conclusion of the 1990 Global Change Institute research programs nationally and internationally have moved forward to implement a number of the recommendations made at the institute and many of the participants have maintained collegial interactions to develop research projects addressing the needs identified during the two weeks in Snowmass

Modeling the Earth System in the Mission to Planet Earth Era
Sushel Unninar, 1993

Modeling the Earth System in the Mission to Planet Earth Era National Aeronautics and Space Administration (NASA), 2018-07-18 A broad overview is made of global earth system modeling in the Mission to Planet Earth MTPE era for the multidisciplinary audience encompassed by the Global Change Research Program GCRP Time scales of global system fluctuation and change are described in Section 2 Section 3 provides a rubric for modeling the global earth system as presently understood The ability of models to predict the future state of the global earth system and the extent to which their predictions are reliable are covered in Sections 4 and 5 The engineering use of global system models and predictions is covered in Section 6 Section 7 covers aspects of an increasing need for improved transform algorithms and better methods to assimilate this information into global models Future monitoring and data requirements are detailed in Section 8 Section 9 covers the NASA initiated concept Mission to Planet Earth which employs space and ground based measurement systems to provide the scientific basis for understanding global change Section 10 concludes this review with general remarks concerning the state of global system modeling and observing technology and the need for future research
