

POWDER METALLURGY IN FRANCE*

By Professor P. LACOMBE†

I.—INTRODUCTION

THE last ten years have seen a growing interest in powder metallurgy in France. Not only has there been increasing activity on the part of firms producing and forming metallic powders, but also an increase in the amount of basic and applied research devoted to sintering processes. Although relatively few university laboratories are working in this field, the big governmental and private organizations have launched an important research effort, inspired, in particular, by the development of atomic energy. The same seems to be true in many other countries and is, indeed, the theme of this Tenth Anniversary Meeting of the Powder Metallurgy Joint Group.

The Société Française de Métallurgie has provided an impetus to this interest in powder metallurgy in two ways. First, by the creation, in 1963, of a Study Group on the sintering of powders. In this group there is an exchange of views, not only between metallurgists from industry, the universities, and the research organizations (IRSID, ONERA, ONIA, CEA, &c.), but also, between solid-state physicists interested particularly in magnetic materials (e.g. ferrites), electronics (ceramics), or aeronautics (dispersion-hardened materials).

The second impetus was provided by the holding in Paris in 1964 of the first European Symposium on Powder Metallurgy, sponsored jointly by the Powder Metallurgy Joint Group, the Ausschuss für Pulvermetallurgie, and the Société Française de Métallurgie. About 400 people took part in this meeting, a large number of them being of nationalities other than those of the three organizing bodies.

I will touch only briefly on the economic and industrial aspects of powder metallurgy, in order to devote more space to describing briefly the development of research on the subject in French laboratories, and attempting to select the most significant advances that have been made in the specific field of atomic energy materials.

II.—THE PROGRESS OF SINTERING IN FRENCH INDUSTRY

The largest firms engaged in producing and fabricating metal powders in France are the Société d'Ugine-Carbone (Eaux-Clares) and the

* Contribution to 10th Anniversary Meeting in London on 15 November 1967.
