Metadata Best Practices and Guidelines Jung-ran Park, 2014-07-10 Metadata best practices and guidelines function as an essential mechanism for metadata planning application and management and interoperability There has been a rapidly growing body of digital repositories and collections accordingly a wide range of digital projects and initiatives have adopted various metadata standards Because of differences in the formats and knowledge domains of the resources it is inevitable that these digital projects and initiatives may have different needs regarding metadata Therefore when a metadata standard is adopted in various institutions and organizations it may have to be modified to reflect the community needs and characteristics of given resources The flexibility and complex structure of natural language allow for the representation of a concept in various ways Thus common understanding and definitions of terms in a given metadata standard is essential for quality metadata generation management interoperability and resource sharing This opens up a pressing need for a systematic examination of documentation practices an area that up to now has been relatively unexplored This book begins to fill the research gap through an empirical assessment of metadata guidelines and best practices This is a book published as a special issue of the Journal of Library Metadata

something much wider as the need for metadata and classification has become critical for usability and legitimacy This development has also led research on classification and knowledge organization to confront a new post humanist reality with not only emerging varieties of information currents in society but also the development of new theoretical and methodological strands such as post colonial and intersectional perspectives and digital humanities methodologies In doing so this book seeks to address critical questions for the archives library and museum sectors concerning the organization of information Exploring Contemporary Classification Practices will therefore be of interest to academics researchers and practitioners with interests in library and information science archives cultural heritage and digital heritage Education for Library Cataloging Dajin D.
