**Metal Compounds in Cancer Therapy** S.P. Fricker, 2012-12-06 The discovery of the antitumour activity of cisplatin in 1965 and its subsequent introduction into clinical trials in 1971 was the catalyst for a major international research effort investigating the potential of metal compounds in cancer therapy Cisplatin now occupies an important place in the armamentarium of the oncologist due to its effectiveness in the treatment of testicular cancer A second generation analogue carbo platin offers reduced toxicity together with therapeutic activity which gives it a place in the front line therapy of genitourinary cancers These and other successes have encouraged the search for novel metal based drugs for cancer therapy Research has shown that metal compounds have potential for activity not only as cytotoxic antitumour agents but also in areas such as adjuvant therapy diagnosis and immunotherapy The aim of this book is to review and describe the major achievements and developments arising from this international research effort The contributing authors come from laboratories throughout Europe and America and represent the many disciplines characteristic of this research such as clinical research pharmacology tumour biology and inorganic medicinal chemistry      [Platinum Coordination Complexes in Cancer Chemotherapy](#) Miles P. Hacker, Evan B. Douple, Irwin H. Krakoff, 2012-12-06 The idea for convening a Fourth International Symposium on Platinum Coordination Complexes in Cancer Chemotherapy was born in an assembly of researchers from the Vermont Regional Cancer Center and the Norris Cotton Cancer Center who shared a common interest in metal complexes It was agreed by those assembled that sufficient time had passed since the Third International Symposium on Platinum Coordination Complexes in Cancer Chemotherapy held in 1976 at the Wadley Institutes of Molecular Medicine in Dallas Texas during which several advances in the chemistry biochemistry pharmacology and clinical use of platinum complexes had occurred to warrant a fourth symposium Furthermore intensive investigations in progress were bringing sophisticated methodologies to bear on the problems in the field clinical trials were yielding interesting results and unique approaches to cancer therapy were being designed Therefore an organizing committee was formed and planning culminated in the symposium which was held in Burlington Vermont June 22 24 1983      **The Role of Metal Complexes and Metal Salts in Cancer Chemotherapy** ,1975      **Metal Complex - DNA Interactions** Nick Hadjiliadis, Einar Sletten, 2009-03-30 Metal ions and metal complexes have long been recognized as critically important components of nucleic acid chemistry both in regulation of gene expression and as promising therapeutic agents Understanding how metal complexes interact with DNA

has become an active research area at the interface between chemistry, molecular biology and medicine. Metal Complex DNA Interactions provides a comprehensive overview of this increasingly diverse field presenting recent developments and the latest research with particular emphasis on metal based drugs and metal ion toxicity. The text is divided into four parts: Basic Structural and Kinetic Aspects includes chapters on sequence selective metal binding to DNA and thermodynamic models; Medical Applications focuses on anticancer platinum drugs including discussions on DNA repair in antitumor effects of platinum drugs and photo dynamic therapy; DNA Recognition Nucleases and Sensor describes probes for DNA recognition; artificial restriction agents metallo DNazymes for metal sensing applications and metal ion dependent catalysis in nucleic acid enzymes; Toxicological Aspects deals with structural studies of mercury DNA interactions chromium induced DNA damage and repair and the effect of arsenic and nickel on DNA integrity. This book will be a valuable resource for academic researchers and professionals from a range of pharmaceutical and chemical industries particularly those involved in the development of new and less toxic anticancer metallo drugs and in the field of environmental and toxicological chemistry.

Schornagel, 1996-04-30. The 7th International Symposium on Platinum and other metal coordination compounds in Cancer Chemotherapy ISPC 95 organized by the European Cancer Centre was held in Amsterdam the Netherlands March 1-4 1995. As with previous ISPC meetings the goal of ISPC 95 was to bring together clinicians, clinical investigators, scientists and laboratory workers from many disciplines to promote further collaboration and cooperation in the development of new platinum and other metal coordination compounds as well as in new ways to use classical drugs as cisplatin and carboplatin in the treatment of cancer. Important aspects addressed by experts in the field included the synthesis and activity of new platinum compounds, the biochemistry and molecular pharmacology as well as the clinical pharmacology of this class of antineoplastic agents, an overview of current clinical studies, one special minisymposium on the mechanisms of cell kill of platinum and one on resistance against platinum compounds. Finally the current status of development of nonplatinum metal complexes was discussed. This volume contains the contributions of the various speakers at ISPC 95 and provides an up to date and comprehensive overview of this important class of anticancer agents ranging from synthesis and molecular pharmacology on one hand to clinical pharmacology and clinical investigations on the other hand. The Organizing Committee and Editors wish to express their gratitude to the contributors to this volume, to the various organizations and pharmaceutical companies for their generous sponsoring of ISPC 95 and to the Plenum Publishing Company for their help in producing this volume.

Noble Metals and Biological Systems Robert R. Brooks, 1992-04-06. Noble Metals and Biological Systems examines the relationship between noble metals (gold, silver and platinum group metals) and biological systems. The book is divided into

three parts Part 1 is concerned with the analytical chemistry of noble metals and includes a description of the latest methods of analysis Part 2 describes such topics as ecology and environmental science of noble metals as they pertain to biogeochemical exploration noble metals in hair the environmental geochemistry of palladium microorganisms and noble metals animals and noble metals and a general survey of noble metals in the environment Coverage is comprehensive and includes information regarding the use of dogs and termites as field assistants in mineral prospecting as well as the fascinating story of the gold bug a microorganism that plates itself with gold Part 3 is devoted entirely to noble metals in the treatment of disease and includes chapters describing the use of osmium and gold for arthritis treatment silver as a bactericide and platinum and ruthenium as anticancer agents Noble Metals and Biological Systems will provide fascinating reading for applied geochemists environmentalists public health specialists ecologists microbiologists clinical biochemists oncologists and specialists in rheumatic diseases Cancer Forum ,1989 **Interactions of Dinuclear Transition Metal Compounds with DNA Nucleobases and Related Nitrogen Donor Ligands** Kemal V.
