Meromorphic Functions And Linear Algebra:

 Meromorphic Functions and Linear Algebra Olavi Nevanlinna,2003 This volume describes for the first time in monograph form important applications in numerical methods of linear algebra The author presents new material and extended results from recent papers in a very readable style The main goal of the book is to study the behavior of the resolvent of a matrix under the perturbation by low rank matrices Whereas the eigenvalues the poles of the resolvent and the pseudospectra the sets where the resolvent takes large values can move dramatically under such perturbations the growth of the resolvent as a matrix valued meromorphic function remains essentially unchanged This has practical implications to the analysis of iterative solvers for large systems of linear algebraic equations First the book introduces the basics of value distribution theory of meromorphic scalar functions It then introduces a new nonlinear tool for linear algebra the total logarithmic size of a matrix which allows for a nontrivial generalization of Rolf Nevanlinna s characteristic function from the scalar theory to matrix and operator valued functions In particular the theory of perturbations by low rank matrices becomes possible As an example if the spectrum of a normal matrix collapses under a low rank perturbation there is always a compensation in terms of the loss of orthogonality of the eigenvectors This qualitative phenomenon is made quantitative by using the new tool Applications are given to rational approximation to the Kreiss matrix theorem and to convergence of Krylov solvers The book is intended for researchers in mathematics in general and especially for those working in numerical linear algebra Much of the book is understandable if the reader has a good background in linear algebra and a first course in complex analysis Meromorphic Functions and Projective Curves Kichoon Yang,2013-11-27 This book contains an exposition of the theory of meromorphic functions and linear series on a compact Riemann surface Thus the main subject matter consists of holomorphic maps from a compact Riemann surface to complex projective space Our emphasis is on families of meromorphic functions and holomorphic curves Our approach is more geometric than algebraic along the lines of Griffiths Harrisl AIso we have relied on the books Namba and Arbarello Cornalba Griffiths Harris to agreat exten nearly every result in Chapters 1 through 4 can be found in the union of these two books Our primary motivation was to understand the totality of meromorphic functions on an algebraic curve Though this is a classical subject and much is known about meromorphic functions we felt that an accessible exposition was lacking in the current literature Thus our book can be thought of as a modest effort to expose parts of the known theory of meromorphic functions and holomorphic curves with a geometric bent We have tried to make the book self contained and concise which meant that several major proofs not essential to further development of the theory had to be omitted The book is targeted at the non expert who wishes to leam enough about meromorphic functions and holomorphic curves so that helshe will be able to apply the results in hislher own research For example a differential geometer working in minimal surface theory may want to tind out more about the distribution pattern of poles and zeros of a meromorphic function **Factorization of Meromorphic Functions** Fred

the points form a finitely generated group There is still no proven algorithm for finding the rank of the group but in one of the earliest important applications of computers to mathematics Birch and Swinnerton Dyer discovered a relation between the rank and the numbers of points on the curve computed modulo a prime Chapter IV of the book proves Mordell s theorem and explains the conjecture of Birch and Swinnerton Dyer Every elliptic curve over the rational numbers has an L series attached to it Hasse conjectured that this L series satisfies a functional equation and in 1955 Taniyama suggested that Hasse s conjecture could be proved by showing that the L series arises from a modular form This was shown to be correct by Wiles and others in the 1990s and as a consequence one obtains a proof of Fermat s Last Theorem Chapter V of the book is devoted to explaining this work The first three chapters develop the basic theory of elliptic curves For this edition the text has been completely revised and updated   Bulletin (new Series) of the American Mathematical Society ,1910   Methods and Applications of Analysis ,2001   Mathematical Reviews ,2008   *U.S. Government Research Reports* ,1961
