Algebraic Specification Techniques in Object Oriented Programming Environments Ruth Breu, 1991-12-04 The main aim of this monograph is to provide a framework for the integrated design of object oriented programs with algebraic specification techniques The design method pursued relies fundamentally on the structuring of systems based on the notion of data types Depending on the level of abstraction data types are described in an object oriented way by algebraic specifications or by machine executable object oriented programs The treatment involves two main aspects First object oriented programs have to be related by a notion of correctness that models the transition from

specifications to program implementations The author presents a notion of correctness which relies on the idea of abstraction functions Second in order to obtain an integrated design environment a uniform structuring concept for object oriented programs and algebraic specifications has to be provided Inheritance subtyping and clientship are three central notions of object oriented structuring The author uses them to develop the kernel of a typed object oriented programming language The monograph provides the formal foundation for a unified framework of algebraic specifications and object oriented programs A major guideline is the development of a design method supporting the structured design and reuse of software in this environment

Integrating Geographic Information Systems and Agent-Based Modeling Techniques for Simulating Social and Ecological Processes H. Randy Gimblett, 2002-01-17 This volume presents a set of coherent cross referenced perspectives on incorporating the spatial representation and analytical power of GIS with agent based modelling of evolutionary and non linear processes and phenomena Many recent advances in software algorithms for incorporating geographic data in modeling social and ecological behaviors and successes in applying such algorithms had not been adequately reported in the literature This book seeks to serve as the standard guide to this broad area

Complexity and Ecosystem Management Marco Janssen, 2002-01-01 The quality of ecosystems is affected by the actions of different stakeholders who use them in a variety of ways In order to understand this complex relationship between humans and nature it is vital to understand the complexity of the interacting agents The authors in this book attempt to do this by applying multi agent systems to the problems of ecosystem management The multi agent approach to ecosystem management is a relatively new and rapidly developing field which takes a formal computational approach towards the interaction of humans with their environment The authors highlight some of the promising new methodologies which are emerging in the field from disciplines such as computer science and computational social science They move on to address a number of important topics including diffusion processes common pool resources land use change and the participatory use of models in an attempt to solve contemporary management issues They clearly demonstrate the potential utility of multi agent systems in the context of theoretical problems and practical case studies

Distributed Computer Control Systems 1989 L. Motus, S. Narita, 2014-07-04 The focus of the workshop was on recent advances in the theory applications and techniques for distributed computer control systems Topics included tools and methods for inner layers of DCCS application papers presenting operational DCCS the infiltration of true real time or time critical concepts and the emergence of artificial intelligence methods in DCCS applications leading to novel computer architectures being integrated in computer networks The book will be of interest not only to those involved in DCCS but also software engineers and distributed computing scientists
