Bushell, 1988 This volume in the Progress in Industrial Microbiology series describes many aspects of the use of computers in fermentation technology The introduction of advanced computer hardware for fermentation control pre dated to some extent the availability of suitable control software As recently as five years ago it was not uncommon for major fermentation plants to have installed state of the art computing facilities which were subsequently used as little more than intelligent recording systems Fermentation technology has now caught up with the other manufacturing sciences in the implementation of advanced computing methodology but the problems are more demanding due to biological variability a phenomenon which characterises all processes involving cell cultures In this volume two approaches to the problem are described one involving optimisation statistics in fermentation process design and the other concentrating on the use of models for control purposes describing the use of the Kalman Filter for real time process optimisation and control The first chapter introduces the opportunities made possible by the implementation of computer systems

in Artificial Neural Networks L. C. Jain, 2018-05-04 Neural networks represent a new generation of information processing paradigms designed to mimic in a very limited sense the human brain They can learn recall and generalize from training data and with their potential applications limited only by the imaginations of scientists and engineers they are commanding tremendous popularity and research interest Over the last four decades researchers have reported a number of neural network paradigms however the newest of these have not appeared in book form until now Recent Advances in Artificial Neural Networks collects the latest neural network paradigms and reports on their promising new applications World renowned experts discuss the use of neural networks in pattern recognition color induction classification cluster detection and more Application engineers scientists and research students from all disciplines with an interest in considering neural networks for solving real world problems will find this collection useful

how during the past decade many AI people have embraced control theory and many control people have learned the basics of AI This Proceedings serves to continue this excellent dialogue by providing many quality papers which link both fields
