Brutsaert,G.H. Jirka,2013-04-17 The transfer across the surface of environmental waters is of interest as an important phase in the geophysical and natural biochemical cycles of numerous substances indeed it governs the transition one way or the other between the dissolved state in the water and the gaseous state in the atmosphere Especially with increasing population and industrialization gas transfer at water surfaces has become a critical factor in the understanding of the various pathways of wastes in the environment and of their engineering management This interfacial mass transfer is by its very nature highly complex The air and the water are usually in turbulent motion and the interface between them is irregular and disturbed by waves sometimes accompanied by breaking spray and bubble formation Thus the transfer involves a wide variety of physical phenomena occurring over a wide range of scales As a consequence scientists and engineers from diverse disciplines and problem areas have approached the problem often with greatly differing analytical and experimental techniques and methodologies Asian Review ,1907 Beginning in 1895 includes the Proceedings of the East India Association **Entertainment Computing - ICEC 2004** Matthias Rauterberg,2004-08-23 The advancement of information and communication technologies ICT has enabled broad use of ICT and facilitated the use of ICT in the private and personal domain ICT related industries are directing their business targets to home applications Among these applications entertainment will differentiate ICT applications in the private and personal market from the office Comprehensive research and development on ICT applications for entertainment will be different for the promotion of ICT use in the home and other places for leisure So far engineering research and development on entertainment has never been really established in the academic communities On the other hand entertainment related industries such as the video and computer game industries have been growing rapidly in the last 10 years and today the entertainment computing business outperforms the turnover of the movie industry Entertainment robots

are drawing the attention of young people. The event called RoboCup has been increasing the number of participants year by year. Entertainment technologies cover a broad range of products and services: movies, music, TV, including upcoming interactive TV, VCR, VoD, including music on demand, computer games, game consoles, video arcades, gambling machines, the Internet, e.g. chat rooms, board and card games, MUD, intelligent toys, edutainment, simulations, sport theme parks, virtual reality, and upcoming service robots. The field of entertainment computing focuses on users growing use of entertainment technologies at work, in school, and at home, and the impact of this technology on their behavior. Nearly every working and living place has computers, and over two thirds of children in industrialized countries have computers in their homes as well. **Nonprofit Notes**, 2000
