Real Time Signal And Image Processing:

Real-time Signal and Image Processing Phillip A. Laplante, 2000 An introduction to intermediate readings in real time image and signal processing It covers issues and challenges hardware support algorithms software languages and systems and applications and case studies

Real-Time Digital Signal Processing Sen M. Kuo, Bob H. Lee, Wenshun Tian, 2006-05-01 Real time Digital Signal Processing Implementations and Applications has been completely updated and revised for the 2nd edition and remains the only book on DSP to provide an overview of DSP theory and programming with hands on experiments using MATLAB C and the newest fixed point processors from Texas Instruments TI

Architecture-Aware Optimization Strategies in Real-time Image Processing Chao Li, Souleymane Balla-Arabe, Fan Yang, 2017-11-02 In the field of image processing many applications require real time execution particularly those in the domains of medicine robotics and transmission to name but a few Recent technological developments have allowed for the integration of more complex algorithms with large data volume into embedded systems in turn producing a series of new sophisticated electronic architectures at affordable prices This book performs an in depth survey on this topic It is primarily written for those who are familiar with the basics of image processing and want to implement the target processing design using different electronic platforms for computing acceleration The authors present techniques and approaches step by step through illustrative examples This book is also suitable for electronics embedded systems engineers who want to consider image processing applications as sufficient imaging algorithm details are given to facilitate their understanding

Real-Time Image and Video Processing Nasser Kehtarnavaz, Mark Gamadia, 2006-12-01 This book presents an overview of the guidelines and strategies for transitioning an image or video processing algorithm from a research environment into a real time constrained environment Such guidelines and strategies are scattered in the literature of various disciplines including image processing computer engineering and software engineering and thus have not previously appeared in one place By bringing these strategies into one place the book is intended to serve the greater community of researchers practicing engineers industrial professionals who are interested in taking an image or video processing algorithm from a research environment to an actual real time implementation on a resource constrained hardware platform These strategies consist of algorithm simplifications hardware architectures and software methods Throughout the book carefully selected representative examples from the literature are presented to illustrate the discussed concepts After reading the book the readers are exposed to a wide variety of techniques and tools which they can then employ to design a real time image or video processing system

Smartphone-Based Real-Time Digital Signal Processing Nasser Kehtarnavaz, Abhishek Sehgal, Shane Parris, Arian Azarang, 2020-08-31 Real time or applied digital signal processing courses are offered as follow ups to conventional or theory oriented digital signal processing courses in many engineering programs for the purpose of teaching students the technical know how for putting signal processing algorithms or theory into practical use These courses

normally involve access to a teaching laboratory that is equipped with hardware boards in particular DSP boards together with their supporting software A number of textbooks have been written discussing how to achieve real time implementation on these hardware boards This book discusses how to use smartphones as hardware boards for real time implementation of signal processing algorithms thus providing an alternative to the hardware boards that are used in signal processing laboratory courses The fact that mobile devices in particular smartphones have become powerful processing platforms led to the development of this book to enable students to use their own smartphones to run signal processing algorithms in real time considering that these days nearly all students possess smartphones Changing the hardware platforms that are currently used in applied or real time signal processing courses to smartphones creates a truly flexible laboratory experience or environment for students In addition it relieves the cost burden associated with using dedicated signal processing boards noting that the software development tools for smartphones are free of charge and are well maintained by smartphone manufacturers This book is written in such a way that it can be used as a textbook for real time or applied digital signal processing courses offered at many universities Ten lab experiments that are commonly encountered in such courses are covered in the book It is written primarily for those who are already familiar with signal processing concepts and are interested in their real time and practical aspects Similar to existing real time courses knowledge of C programming is assumed This book can also be used as a self study guide for those who wish to become familiar with signal processing app development on either Android or iOS smartphones tablets

Optical Signal & Image Processing Society of Photo-Optical Instrumentation Engineers,1977

Microcomputer Application in Process Control E. Adali,F. Tunali,2014-06-28 This symposium brings together the research from different disciplines of process control and discusses the problems encountered in the application of automation systems The papers in this volume analyze the results of theoretical research and how far applications have been developed new design methodologies and technologies to give a comprehensive overview of the state of the art of this fast developing science

Smartphone-Based Real-Time Digital Signal Processing Nasser Kehtarnavaz,Abhishek Sehgal,Shane Parris,2018-12-17 Real time or applied digital signal processing courses are offered as follow ups to conventional or theory oriented digital signal processing courses in many engineering programs for the purpose of teaching students the technical know how for putting signal processing algorithms or theory into practical use These courses normally involve access to a teaching laboratory that is equipped with hardware boards in particular DSP boards together with their supporting software A number of textbooks have been written discussing how to achieve real time implementation on these hardware boards This book discusses how to use smartphones as hardware boards for real time implementation of signal processing algorithms as an alternative to the hardware boards that are used in signal processing laboratory courses The fact that mobile devices in particular smartphones have become powerful processing platforms led to the development of this book enabling students to use their own smartphones to run signal processing

algorithms in real time considering that these days nearly all students possess smartphones Changing the hardware platforms that are currently used in applied or real time signal processing courses to smartphones creates a truly mobile laboratory experience or environment for students In addition it relieves the cost burden associated with using dedicated signal processing boards noting that the software development tools for smartphones are free of charge and are well maintained by smartphone manufacturers This book is written in such a way that it can be used as a textbook for real time or applied digital signal processing courses offered at many universities Ten lab experiments that are commonly encountered in such courses are covered in the book This book is written primarily for those who are already familiar with signal processing concepts and are interested in their real time and practical aspects Similar to existing real time courses knowledge of C programming is assumed This book can also be used as a self study guide for those who wish to become familiar with signal processing app development on either Android or iPhone smartphones

Spline and Spline Wavelet Methods with Applications to Signal and Image Processing Amir Z. Averbuch, Pekka

Neittaanmaki, Valery A. Zheludev, 2014-04-08 This volume provides universal methodologies accompanied by Matlab software to manipulate numerous signal and image processing applications. It is done with discrete and polynomial periodic splines. Various contributions of splines to signal and image processing from a unified perspective are presented. This presentation is based on Zak transform and on Spline Harmonic Analysis. SHA methodology. SHA combines approximation capabilities of splines with the computational efficiency of the Fast Fourier transform. SHA reduces the design of different spline types such as splines, spline wavelets, SW wavelet frames, SWF and wavelet packets, SWP and their manipulations by simple operations. Digital filters produced by wavelets design process give birth to subdivision schemes. Subdivision schemes enable to perform fast explicit computation of splines values at dyadic and triadic rational points. This is used for signals and images up sampling. In addition to the design of a diverse library of splines, SW, SWP and SWF, this book describes their applications to practical problems. The applications include up sampling, image denoising, recovery from blurred images, hydro acoustic target detection to name a few. The SWF are utilized for image restoration that was degraded by noise, blurring and loss of significant number of pixels. The book is accompanied by Matlab based software that demonstrates and implements all the presented algorithms. The book combines extensive theoretical exposure with detailed description of algorithms, applications and software. The Matlab software can be downloaded from <http://extras.springer.com>
