with those typically studied by other social sciences. The combination is expected to provide a better understanding of economic behavior and the economy as well as society make more reliable predictions and be more in line with normative values we seek to uphold. The new field though may be less elegant mathematically and possibly less parsimonious than neoclassical economics. Some of my ideas on this subject are included in a previously published book *The Moral Dimension: Toward A New Economics* (New York: The Free Press, 1988). They also led to a formation of an international society of several thousand scholars who are interested in the field, the Society for the Advancement of Socio Economics. The essays at hand are in effect grouped. The first two previously published respectively in the *Journal of Economic Psychology* and *Business Ethics Quarterly* reflect my most recent thinking. They both have a utopian streak that may stand out especially in these days when unfeathered capitalism is the rage. The first points to people who far from making consuming ever more their life's project seek a less affluent way of life. It examines the psychological foundations and the social consequences of such an approach.
