Making Robots:

Making Simple Robots Kathy Ceceri, 2015-02-19 Making Simple Robots is based on one idea Anybody can build a robot That includes kids school teachers parents and non engineers If you can knit sew or fold a flat piece of paper into a box you can build a no tech robotic part If you can use a hot glue gun you can learn to solder basic electronics into a low tech robot that reacts to its environment And if you can figure out how to use the apps on your smart phone you can learn enough programming to communicate with a simple robot Written in language that non engineers can understand Making Simple Robots helps beginners move beyond basic craft skills and materials to the latest products and tools being used by artists and inventors Find out how to animate folded paper origami design a versatile robot wheel leg for 3D printing or program a rag doll to blink its cyborg eye Each project includes step by step directions as well as clear diagrams and photographs And every chapter offers suggestions for modifying and expanding the projects so that you can return to the projects again and again as your skill set grows

Robots for Kids Allison Druin, James A. The Coming Robot Revolution Yoseph Bar-Cohen, David Hanson, 2009-04-20 Making a robot that looks and behaves like a human being has been the subject of many popular science fiction movies and books Although the development of such a robot faces many challenges the making of a virtual human has long been potentially possible With recent advances in various key technologies related to hardware and software the making of humanlike robots is increasingly becoming an engineering reality Development of the required hardware that can perform humanlike functions in a lifelike manner has benefitted greatly from development in such technologies as biologically inspired materials artificial intelligence artificial vision and many others Producing a humanlike robot that makes body and facial expressions communicates verbally

using extensive vocabulary and interprets speech with high accuracy is extremely complicated to engineer. Advances in voice recognition and speech synthesis are increasingly improving communication capabilities. In our daily life we encounter such innovations when we call the telephone operators of most companies today. As robotics technology continues to improve we are approaching the point where on seeing such a robot we will respond with "Wow, this robot looks unbelievably real, just like the reaction to an artificial flower." The accelerating pace of advances in related fields suggests that the emergence of humanlike robots that become part of our daily life seems to be imminent. These robots are expected to raise ethical concerns and may also raise many complex questions related to their interaction with humans.
