**The Ontogeny of Information** Susan Oyama,2000-03-16 In this work the author attempts to complicate certain conventional dichotomies particularly the nature nurture split that she believes impede scientific inquiry and thought about individual development and to untangle the often subtle assumptions embedded in them. *The Ontogeny of Information* Susan Oyama,1986-02-28 In *The Ontogeny of Information* Susan Oyama draws on psychology biology and anthropology as well as philosophy and history to explore the many facets of the nature nurture debate Our deepest beliefs about what is natural inevitable and unchangeable what is normal and good are affected by our concept of biological nature Because the non academic world also continues to frame important questions in terms of genetic necessity and cultural overlay this distinction between nature and culture has serious implications for the conduct of private lives and for the making of public policy

**Deleuze and Evolutionary Theory** Bennett Michael James Bennett,2019-01-30 Deleuze and Evolutionary Theory gathers together contributions by many of the central theorists in Deleuze studies who have led the way in breaking down the boundaries between philosophical and biological research They focus on the significance of Deleuze and Guattari's engagements with evolutionary theory across the full range of their work from the interpretation of Darwin in *Difference and Repetition* to the symbiotic alliances of wasp and orchid in *A Thousand Plateaus* In this way they explore the anthropological social and biopolitical significance of the convergences and divergences between philosophy and evolutionary science *The Oxford Handbook of Developmental Psychology, Vol. 1* Philip David Zelazo,2013-03-21 This handbook provides a comprehensive survey of what is now known about psychological development from birth to biological maturity and it highlights how cultural social cognitive neural and molecular processes work together to yield human behavior and changes in human behavior *Oxford Handbook of Developmental Behavioral Neuroscience* Mark Blumberg,John Freeman,Scott R. Robinson,2010 *The Oxford Handbook of Developmental Behavioral Neuroscience* is a seminal reference work in the burgeoning field of developmental behavioral neuroscience which has emerged in recent years as an important sister discipline to developmental psychobiology This handbook part of the Oxford Library of Neuroscience provides an introduction to recent advances in research at the intersection of developmental science and behavioral neuroscience while emphasizing the central research perspectives of developmental psychobiology Contributors to the *Oxford Handbook of Developmental Behavioral Neuroscience* are drawn from a variety of fields including developmental psychobiology neuroscience comparative psychology and evolutionary biology demonstrating the opportunities to advance

our understanding of behavioral and neural development through enhanced interactions among parallel disciplines In a field ripe for collaboration and integration the Oxford Handbook of Developmental Behavioral Neuroscience provides an unprecedented overview of conceptual and methodological issues pertaining to comparative and developmental neuroscience that can serve as a roadmap for researchers and a textbook for educators Its broad reach will spur new insights and compel new collaborations in this rapidly growing field

**Foundations of Evolutionary Psychology** Charles Crawford, Dennis Krebs, 2012-10-12 Evolutionary psychology is concerned with the adaptive problems early humans faced in ancestral human environments the nature of the psychological mechanisms natural selection shaped to deal with those ancient problems and the ability of the resulting evolved psychological mechanisms to deal with the problems people face in the modern world Evolutionary psychology is currently advancing our understanding of altruism moral behavior family violence sexual aggression warfare aesthetics the nature of language and gender differences in mate choice and perception It is helping us understand the relationships between cognitive science developmental psychology behavior genetics personality and social psychology Foundations of Evolutionary Psychology provides an up to date review of the ideas issues and applications of contemporary evolutionary psychology It is suitable for senior undergraduates first year graduate students or professionals who wish to become conversant with the major issues currently shaping the emergence of this dynamic new field It will be interesting to psychologists anthropologists sociologists economists philosophers cognitive scientists and anyone interested in using new developments in the theory of evolution to gain new insights into human behavior

**The Environmental Uncanny** Brian A. Irwin, 2024-06-27 Explores the increasing destitution of the human environment from a phenomenological perspective

**Keywords and Concepts in Evolutionary Developmental Biology** Brian K. Hall, Wendy M. Olson, Wendy Olson, 2003-05-30 Covering more than 50 central terms concepts the entries in this reference offer an overview of all that is embraced by the subdiscipline of evolutionary developmental biology providing core insights ideas that show how embryonic development relates to life history evolution adaptation

*Evolution's Eye* Susan Oyama, 2000-05-03 Collection of essays by Susan Oyama looking at the implications of developmental systems approach for evolutionary theory specifically for nature nurture oppositions ideas of essential human nature and the limits of human agency and possibility

*Abstracts and Bibliography*, 1993

**Plant Evolutionary Biology** L. Gottlieb, 2012-12-06 There are still heroes in science They are recognized because the issues and problems they chose to study became the issues and problems of a major field of research They are also recognized because their insights and solutions are the ones that are tested and evaluated when new ideas and technologies become available In the field of plant evolutionary biology the hero is George Ledyard Stebbins His first scientific publication appeared in 1929 and has been followed by nearly 60 magnificent years of seminal ideas proofs and proposals that defined much of what was worth doing in plant biosystematics evolution and biological

conservation His energy enthusiasm and good humor widely shared at many congresses and symposia in the Singalongs with Stebbins made him a wonderful teacher for both undergraduates and graduate students He is the mentor of several generations of botanists plant geneticists and evolutionists A brief biography and publication list were included in Topics in Plant Population Biology edited by Otto T Solbrig Subodh Jain George Johnson and Peter Raven Columbia University Press 1979 which resulted from a symposium held on the occasion of Ledyard Stebbins 70th birthday In this volume population biology and physiological ecology received major attention particularly in relation to plant form and function Genes in Development Eva M. Neumann-Held, Christoph Rehmann-Sutter, 2006 In light of scientific advances such as genomics predictive diagnostics genetically engineered agriculture nuclear transfer cloning and the manipulation of stem cells the idea that genes carry predetermined molecular programs or blueprints is pervasive Yet new scientific discoveries such as rna transcripts of single genes that can lead to the production of different compounds from the same pieces of dna challenge the concept of the gene alone as the dominant factor in biological development Increasingly aware of the tension between certain empirical results and interpretations of those results based on the orthodox view of genetic determinism a growing number of scientists urge a rethinking of what a gene is and how it works In this collection a group of internationally renowned scientists present some prominent alternative approaches to understanding the role of dna in the construction and function of biological organisms Contributors discuss alternatives to the programmatic view of dna including the developmental systems approach methodical culturalism the molecular process concept of the gene the hermeneutic theory of description and process structuralist biology None of the approaches cast doubt on the notion that dna is tremendously important to biological life on earth rather contributors examine different ideas of how dna should be represented evaluated and explained Just as ideas about genetic codes have reached far beyond the realm of science the reconceptualizations of genetic theory in this volume have broad implications for ethics philosophy and the social sciences Contributors Thomas Berglin Brian C Goodwin James Griesemer Paul Griffiths Jesper Hoffmeyer Evelyn Fox Keller Gerd B Müller Eva M Neumann Held Stuart A Newman Susan Oyama Christoph Rehmann Sutter Sahotra Sarkar Jackie Leach Scully Gerry Webster Ulrich Wolf

**Contagious Ideas** Ben Sandford Cullen, 2000 Neo Darwinism is becoming an increasingly important influence on archaeological theory as a number of recently edited books on Darwinian archaeologies make clear However many of these volumes are internationally inconsistent and reflect the muddled understanding many archaeologists have of the potential of Darwin's thought for interpreting material culture Ben Cullen's book starts by critiquing some recent neo Darwinist approaches including cultural evolutionism and cultural sociobiology He then presents a neo Darwinian paradigm of extreme power which he has termed the Cultural Virus Theory CVT This focuses on explaining the transmission of ideas by comparing cultural memes with natural genes In the final section he takes the important step of applying this theory to real materials demonstrating how CVT can be used to understand the spread of megalithic monuments in prehistoric North West Europe

the diffusion of the renaissance in medieval Europe and the basis of stylistic change in pottery Tragically this collection of brilliant thoughts is published posthumously Ben Cullen was close to finishing a major book when he died suddenly in 1995 and his writings have been gathered into a consistent whole by James Steele Richard Cullen and Christopher Chippendale
