Instrumental Reasoning and

Systems Methodology Richard Mattessich, 2012-12-06 This book has been written primarily for the applied and social scientist and student who longs for an integrated picture of the foundations on which his research must ultimately rest but hopefully the book may also serve philosophers interested in applied disciplines and in systems methodology If integration was the major motto the need for a methodology appropriate to the teleological peculiarities of all applied sciences was the main impetus behind the conception of the present work This need I felt a long time ago in my own area of analytical and empirical research in accounting theory and management science later I had the opportunity to teach for almost a decade graduate seminars in Methodology which offered particular insight into the methodological needs of students of such applied disciplines as business administration education engineering informatics etc Out of this effort grew the present book which among other things tries on one side to illuminate the difference and relationship between methods of cognition and methods of decision and on the other to sketch a framework suitable for depicting means end relationships in a holistic setting I believe that a systems methodology which incorporates recent endeavours of deontic logic decision theory information economics and related areas would be eminently suited to break the ground for such a future framework Yet systems theory has two major shortcomings which might prevent it from evolving into the desired methodology of applied science
