Operational Semantics For Timed Systems:

Operational Semantics for Timed Systems Heinrich Rust, 2005-04-04 This monograph is dedicated to a novel approach for uniform modeling of timed and hybrid systems The author introduces a time model that allows for both the description of discrete time steps and continuous processes with a discrete time model with infinitesimal step widths The underlying mathematical structure of this time model is based on the concepts of non standard analysis The discrete modeling i e the description of sequential discrete algorithms at different abstraction levels is done using the abstract state machines formalism The presentation is well balanced between theoretical elaboration and critical discussion of the applicability of the theoretical results by means of appropriate case studies The new temporal semantics proposed helps theoreticians as well as practitioners in gaining a better understanding of time models and in building better notations models and tools for the formal treatment of systems where time matters [A Non-standard Approach to Operational Semantics for Timed Systems](#) ,2004

Model-Based Engineering of Embedded Real-Time Systems Holger Giese, Gabor Karsai, Edward A. Lee, Bernhard Rumpe, Bernhard Schätz, 2010-10-06 The topic of Model Based Engineering of Real Time Embedded Systems brings together a challenging problem domain real time embedded systems and a lution domain model based engineering It is also at the forefront of integrated software and systems engineering as software in this problem domain is an essential tool for system implementation and integration Today real time bedded software plays a crucial role in most advanced technical systems such as airplanes mobile phones and cars and has become the main driver and cilitator for innovation Development evolution veri cation con guration and maintenance of embedded and distributed software nowadays are often serious challenges as drastic increases in complexity can be observed in practice Model based engineering in general and model based software development in particular advocates the notion of using models throughout the development and life cycle of an engineered system Model based software engineering re forces this notion by promoting models not only as the tool of abstraction but also as the tool for veri cation implementation testing and maintenance The application of such model based engineering techniques to embedded real time systems appears to be a good candidate to tackle some of the problems arising in the problem domain

Formal Modeling and Analysis of Timed Systems Alessandro Abate, Gilles Geeraerts, 2017-09-01 This book constitutes the refereed proceedings of the 15th International Conference on Formal Modeling and Analysis of Timed Systems FORMATS 2017 held in Berlin Germany in September 2017 The aim of FORMATS is to promote the study of fundamental and practical aspects of timed systems and to bring together researchers from different disciplines that share interests in modelling and analysis of timed systems and as a generalization hybrid systems

Formal Techniques in Real-Time and Fault-Tolerant Systems Anders P. Ravn, Hans Rischel, 1998-09-02 This book constitutes the refereed proceedings of the 5th International Symposium on Formal Techniques in Real Time and Fault Tolerant Systems FTRTFT 98 held in Lyngby Denmark in September 1998 The 22 revised full papers

presented were carefully selected and reviewed for inclusion in the book Also included are four invited contributions and five tool demonstrations The papers address the current aspects of the hot topic of embedded systems in particular temporal logic requirements engineering analysis techniques verification model checking and applications

Formal Modeling and Analysis of Timed Systems Krishnendu Chatterjee, Thomas A. Henzinger, 2010-09-07 This volume contains the papers that were presented at the 8th International Conference on Formal Modeling and Analysis of Timed Systems FORMATS 2010 held September 8-10 2010 at IST Institute of Science and Technology Austria in Klosterneuburg Austria The modeling and analysis of timing aspects of systems is a key problem that has been treated independently in several different communities in computer science and related areas Researchers interested in semantics verification real-time scheduling and performance analysis study models such as timed automata and timed Petri nets the digital design community focuses on propagation and switching delays and designers of embedded controllers need to take into account the time required by controllers to compute their responses after sampling the environment Although the timing related questions in these separate communities have their own specific nature there is a growing awareness that there are basic problems that are common to all of them In particular all of these disciplines model and analyze systems whose behavior depends on combinations of logical and timing constraints between occurrences of events The aim of FORMATS is to promote the study of fundamental and practical aspects of timed systems and to bring together researchers from different disciplines that share an interest in the modeling and analysis of timed systems Typical topics include but are not limited to Foundations and Semantics theoretical foundations of timed systems and languages comparison between different models timed automata timed Petri nets hybrid automata timed process algebra max plus algebra probabilistic models

Operational Semantics of Timed Interacting Systems Ina Schieferdecker, Adam Wolisz, 1992 Extending Formal Description Techniques so as to support direct performance analysis out of the formal specification is an appealing idea in the communication protocol engineering Recently a new proposal for such an extension of the process algebraic specification called Timed Interacting Systems TIS has been formulated TIS includes the notion of time consumed both before and during a communication event quantification of nondeterminism via assigning probabilities to alternative communication events as well as a specific concept of resources needed to execute a communication event In this report we present the operational semantics for a major subset of TIS
