Operations Research Mathematics Models:

Mathematical Models in Operations Research J. K. Sharma, 1989 Probabilistic Models in Operations Research Silviu Guiasu, 2009 Operations Research often abbreviated as OR is a relatively new branch of Applied Mathematics Its aim is to optimise mathematical models of reality involving probabilistic uncertainty and its results are applied to real life problems The aim of this book is to cover in a condensed but rigorous way the main chapter of the OR probabilistic models based on optimisation The topics are taken from Game Theory Decision Theory Simulation Reliability and Queuing Theory Game Theory deals with how to find the best winning strategies in a confrontation between two players with opposite interest and how to evaluate the value of different possible coalitions in a game involving more than two players In Decision Theory the main objective is to find the optimum actions of the decision maker for minimising his loss when he has limited information available and faces uncertainty about the future possible events Simulation is a powerful instrument for obtaining representative examples of any length from probability distributions of interest and for approximating multiple definite integrals and the solutions of linear and non linear equations and programs In the chapter dealing with Reliability the main problem is how to evaluate the probability that a system functions properly or is still alive during an arbitrary time interval Finally Queuing Theory deals with how to assess what may happen in a complex system where the customers arrive randomly wait in line and later are served A main concept is the waiting time in the queuing system waiting to be served and being served In each chapter some representative examples and the mathematical formalism are discussed first eventually followed by the comments on ramifications generalisations and applications of the basic results Computer tips and programs are inserted in each chapter The text is based on lectures delivered for more than twenty five years in the Department of Mathematics and Statistics at York University in Toronto The book is rather a monograph on the probabilistic models in Operations Research which could also be used as a text book in a more advanced OR course The book is self contained compact and accessible to mathematicians economists system analysts decision makers and people dealing with computer assisted modelling It contains also new original topics and proofs not covered in the standard OR textbooks The chapters are kept to be as independent as possible Operations Research Models and Methods Paul A. Jensen, Jonathan F. Bard, 2002-10-08 In a rapidly developing field like Operations Research its easy to get overwhelmed by the variety of topics and analytic techniques Paul Jensen and Jonathan Bard help you master the expensive field by focusing on the fundamental models and methodologies underlying the practice of Operations Research Bridging the gap between theory and practice the author presents the quantitative tools and models most important to understanding modern operations research You ll come to appreciate the power of OR techniques in solving real world problems and applications in your own field You ll learn how to translate complex situations into mathematical models solve models and turn models into solutions This text is designed to bridge the gap between theory and practice by presenting the quantitative tools and models most suited for modern

operations research The principal goal is to give analysts engineers and decision makers a larger appreciation of their roles by defining a common terminology and by explaining the interfaces between the underlying methodologies Features Divides each subject into methods and models giving you greater flexibility in how you approach the material Concise and focused presentation highlights central ideas Many examples throughout the text will help you better understand mathematical material

Modeling Operations Research and Business Analytics William P Fox,Robert E. Burks,2024-08-30 This book provides sample exercises techniques and solutions to employ mathematical modeling to solve problems in Operations Research and Business Analytics Each chapter begins with a scenario and includes exercises built on realistic problems faced by managers and others working in operations research business analytics and other fields employing applied mathematics A set of assumptions is presented and then a model is formulated A solution is offered followed by examples of how that model can be used to address related issues Key elements of this book include the most common problems the authors have encountered over research and while consulting the fields including inventory theory facilities location linear and integer programming assignment transportation and shipping critical path dynamic programming queuing models simulation models reliability of system multi attribute decision making and game theory In the hands of an experienced professional mathematical modeling can be a powerful tool This book presents situations and models to help both professionals and students learn to employ these techniques to improve outcomes and to make addressing real business problems easier The book is essential for all managers and others who would use mathematics to improve their problem solving techniques No previous exposure to mathematical modeling is required The book can then be used for a first course on modeling or by those with more experience who want to refresh their memories when they find themselves facing real world problems The problems chosen are presented to represent those faced by practitioners The authors have been teaching mathematical modeling to students and professionals for nearly 40 years This book is presented to offer their experience and techniques to instructors students and professionals

Development and Optimization of Mathematical Models for Operations Research Humberto Rocha,Ana Maria Rocha,2023-03-09 The development of mathematical models and their optimization are fundamental for the effective resolution of many problems in operational research In recent years increased insights into real world problems have led to the development of new mathematical models and optimization algorithms contributing to the development of a research area with increasing practical relevance This Special Issue is dedicated to works at the interface of mathematical modeling optimization and operations research with a special focus on their real world applications The interest of the scientific community was significant with submissions from authors from different countries from five continents including Australia China Egypt India Israel Portugal Russia Saudi Arabia and the United States of America Ten papers were accepted for publication after thorough peer review by dedicated reviewers with expertise in the relevant fields We are confident that the papers selected for this Special Issue will attract a significant audience in the scientific community
