angiography which section has been extended on the base of the probability that the clinician in general practice too has been or will be confronted with this rapidly expanding and fascinating field The reason to bring together two methods of objective examination of visual functions i e electro ophthalmology and echo ophthalmology is clearly due to the intimate connection between the two In many ways these methods complement each other in providing the final diagnosis This report does not intend to replace text books nor to outdate treatises on superspecialised ophthalmic subjects it simply tends to provide the clinician with a basic information on selected techniques stimulating the reader to start using them in daily practice
