ABSTRACT

Objectives. There is a need for novel approaches to address the complexity of social inequality in health. Public-private partnerships (PPPs) have been proposed as a promising approach; however, knowledge on lessons learnt from such partnerships remain unclear. This study synthesises evidence on opportunities and challenges of PPPs focusing on social inequality in health in upper-middle-income and high-income countries.

Design. A systematic literature review and meta-synthesis was conducted using the Mixed Methods Appraisal Tool for quality appraisal.

Data sources. PubMed, PsycInfo, Embase, Sociological Abstracts and Socindex were searched for studies published between January 2013 and January 2023.

Eligibility criteria. Studies were eligible if they applied a quantitative, qualitative, or mixed methods design and reported on lessons learnt from PPPs focusing on social inequality in health in upper-middle-income and high-income countries. Studies had to be published in either English, Danish, German, Norwegian or Swedish.

Data extraction and synthesis. Two independent reviewers extracted data and appraised the quality of the included studies. A meta-synthesis with a descriptive intent was conducted and data were grouped into opportunities and challenges.

Results. A total of 16 studies of varying methodological quality were included. Opportunities covered three themes: (1) creating synergies, (2) clear communication and coordination, and (3) trust to sustain partnerships. Challenges were identified as reflected in the following three themes: (1) scarce resources, (2) inadequate communication and coordination, and (3) concerns on distrust and conflicting interest.

Conclusions. Partnerships across public, private and academic institutions hold the potential to address social inequality in health. Nevertheless, a variety of important lessons learnt are identified in the scientific literature. For future PPPs to be successful, partners should be aware of the availability of resources, provide clear communication and coordination, and address concerns on distrust and conflicting interests among partners.

STRENGTHS AND LIMITATIONS OF THIS STUDY

- A comprehensive search strategy for five electronic databases was developed using Medical Subject Headings, Emtree and Index Terms.
- Restricting the search to upper-middle-income and high-income countries enabled a thorough and nuanced exploration of public-private partnerships.
- The Mixed Methods Appraisal Tool allowed for appraisal of various types of study designs.
- The heterogeneity of the included studies in terms of interventions and reported outcomes challenged the synthesis of learnings across studies.
- Ambiguity in country-specific circumstances in classification of institutions as ‘public’, ‘private’ or ‘academic’ influenced comparison between countries.

INTRODUCTION

Social inequality in health persists as a major public health challenge across upper-middle-income and high-income countries.^{1–3} Such systematic differences in health trajectories are caused by complex interplays between microlevel and macrolevel factors.^{1–4} This complexity impedes single institutions in resolving social inequality in health alone,^{5–9} and therefore engagement of multiple partners across public, private and academic institutions has been suggested as a way forward.^{6–12} Thus, to address some of the complex drivers of social inequality in health, potentials in long-term, extensive and innovative collaborations in public-private partnerships (PPPs) based on targeted interventions have been identified.^{5–9,13,14}

PPP is used as an umbrella term for the continuum of voluntary cooperative arrangements between public and private institutions, which entails all involved partners agreeing to collaborate to achieve a common purpose.^{5,20} By bringing together different perspectives across institutions, innovative solutions based
