Next Generation Optical Network Design and Modelling Andrea Bianco, Fabio Neri, 2013-11-11 Optical networks are leaving the labs and becoming a reality Despite the current crisis of the telecom industry our everyday life increasingly depends on communication networks for information exchange medicine education data transfer commerce and many other endeavours High capacity links are required by the large internet traffic demand and optical networks remain one of the most promising technologies for meeting these needs WDM systems are today widely deployed thanks to low cost at extreme data rates and high reliability of optical components such as optical amplifiers and fixed tunable filters and transceivers Access and metropolitan area networks are increasingly based on optical technologies to overcome the electronic bottleneck at the network edge Traditional multi layer architectures such as the widely deployed IP ATM SDH protocol stack are increasingly based on WDM transport further efforts are sought to move at the optical layer more of the functionalities available today in

higher protocol layers New components and subsystems for very high speed optical networks offer new design opportunities to network operators and designers The trends towards dynamically configurable all optical network infrastructures open up a wide range of new network engineering and design choices which must face issues such as interoperability and unified control and management Towards an Optical Internet Admela Jukan,2013-06-05 In these exciting times of quotidianly progressing developments in communication techniques where more than ever in the history of a technological progress society's reliance on communication networks for medicine education data transfer commerce and many other endeavours dominates the human's everyday life the optical networks are certainly one of the most promising and challenging networking options Since their commercial arrival in the nineties they have fundamentally changed the way of dealing with traffic engineering by removing bandwidth bottlenecks and eliminating delays Today after the revolutionary bandwidth expansion the networking functionality migrates more and more to the optical layer and the need to establish fast wavelength circuits and capacity on demand for the higher layer networks in particular data networks based on Internet Protocol IP has become one of the central networking issues for the new century The unifying trends toward configurable all optical network infrastructure open up a wide range of new network engineering and design choices dealing with networks interoperability and common platforms for control and management The Fifth Working Conference on Optical Network Design and Modelling held in the Austrian capital Vienna February 5-7 2001 aims at presenting the most recent progress in optical communication techniques new technologies standardisation process emerging markets and carriers A short look at the Table of Contents of this book tells us in fact that this year's conference program reflects the current state of the art precisely Optical Network Design and Modelling Harmen R. van As,Admela Jukan,2013-01-25 Optical network design and modelling is an essential issue for planning and operating networks for the next century The main issues in optical networking are being widely investigated not only for WDM networks but also for optical TDM and optical packet switching This book aims to contribute to further progress in optical network architectures design operation and management and covers the following topics in detail OAM functions and layered design of photonic networks network planning and design network modelling analysis and protocols of optical LANs network availability and performance modelling This book contains the selected proceedings of the International Working Conference on Optical Network Design and Modelling sponsored by the International Federation for Information Processing IFIP and was held in February 1997 in Vienna Austria The valuable book will be essential reading for personnel in computer communication industries and academic and research staff in computer science and electrical engineering *International Conference on Optical Network Design and Modeling, 2008*,2008
