Shark Attack Against Man Henry David Baldrige,1973 Data from 1165 case histories of shark attack against man were
reduced to a form handleable by automatic data retrieval systems Numerous probes by computer were made to provide
statistical significance to the existence or absence of common factors associated with known instances of predaceous shark
behavior and evaluate the present approach of gathering meaningful data on shark attack and thereby determine
requirements for maintaining such an effort in the future Although information was carefully screened for correlations
between occurrence of shark attack and a number of environmental and behavioral parameters it was considered of greater
importance that patterns or relationships be identified that distinguished victims from non victims among exposed
populations Points of interest were examined in the light of previously accepted correlations and popular beliefs Modified

very expression sends a shiver down the spine It conjures terrifying images of hidden menace from the undersea world of
rasping teeth of injuries too horrifying to contemplate of once calm water foaming pink with blood The reality of shark attack
