**Operations Research and Artificial Intelligence: The Integration of Problem-Solving Strategies** Donald E. Brown, Chelsea C. White III, 2012-12-06 The purpose of this book is to introduce and explain research at the boundary between two fields that view problem solving from different perspectives Researchers in operations research and artificial intelligence have traditionally remained separate in their activities Recently there has been an explosion of work at the border of the two fields as members of both communities seek to leverage their activities and resolve problems that remain intractable to pure operations research or artificial intelligence techniques This book presents representative results from this current flurry of activity and provides insights into promising directions for continued exploration This book should be of special interest to researchers in artificial intelligence and operations research because it exposes a number of applications and techniques which have benefited from the integration of problem solving strategies Even researchers working on different applications or with different techniques can benefit from the descriptions contained here because they provide insight into effective methods for combining approaches from the two fields Additionally researchers in both communities will find a wealth of pointers to challenging new problems and potential opportunities that exist at the interface between operations research and artificial intelligence In addition to the obvious interest the book should have for members of the operations research and artificial intelligence communities the papers here are also relevant to members of other research communities and development activities that can benefit from improvements to fundamental problem solving approaches

**Artificial Intelligence** Jangili Srinivasa Rao, Ms. Kasetti Silpa, Madhusudhan Gurramkonda, Mrs. Archana Bhushan Burujwale, 2026-02-04 Artificial Intelligence is a comprehensive academic text that introduces the principles techniques and applications of intelligent systems The book covers fundamental topics such as problem solving and search algorithms knowledge representation reasoning machine learning neural networks natural language processing computer vision robotics and expert systems It also addresses ethical considerations real world applications and the impact of AI on society and industry Emphasizing both theoretical foundations and practical implementation the text provides examples case studies and algorithmic approaches to help students and professionals understand how intelligent systems are designed analyzed and deployed Suitable for undergraduate and postgraduate students in computer science engineering and related disciplines the book equips learners with the skills necessary to develop and apply AI solutions across various domains

*Mathematical Methods in Defense Analyses* J. S. Przemieniecki, 2000 Annotation This text presents the various mathematical methods used in military operations research in one easy to use reference volume The reader will find the calculations necessary to analyze all aspects of defense operations from weapon performance to combat modeling The text is so clearly written and organized that even newcomers to the field will find it useful Included with the text is an updated version of Defense Analyses Software a compendium of software subroutines that allow the reader to compute numerical values for functions or tables derived in

the text Each subroutine is provided with a detailed reference to the equation from which it was derived to ensure that its intended application is consistent with the assumptions used in the derivation The third edition has a new chapter on theater missile defense based on the concept of layered defense with different strategies of allocating defense interceptors against short or mid range ballistic missiles Opportunities to Improve Airport Passenger Screening with Mass Spectrometry National Research Council, Division on Engineering and Physical Sciences, National Materials Advisory Board, Committee on Assessment of Security Technologies for Transportation, 2004-05-12 Protection of the traveling public from terrorist threats involving explosives is a major goal of the Transportation Security Administration TSA For 20 years the TSA and the Federal Aviation Administration before it have been investing in technologies to meet that goal To support that activity the TSA has asked the NRC to assess a variety of technological opportunities for offering such protection The NRC is approaching this assignment by issuing a series of reports on chosen technology applications This is the first of that series and presents an assessment of mass spectrometry for enhanced trace detection ETD of chemicals contained in explosives The report describes limitations of trace detection in general and the current technologies in particular It then presents a discussion of the potential for mass spectrometry to improve EDT including challenges faced by such a system recommendations for starting a program to take advantage of mass spectrometry and recommendations for a phased implementation plan

**Fusion of Security System Data to Improve Airport Security** National Research Council, Division on Engineering and Physical Sciences, National Materials Advisory Board, Committee on Assessment of Security Technologies for Transportation, 2007-12-14 The security of the U S commercial aviation system has been a growing concern since the 1970 s when the hijacking of aircraft became a serious problem Over that period federal aviation officials have been searching for more effective ways for non invasive screening of passengers luggage and cargo to detect concealed explosives and weapons To assist in this effort the Transportation Security Administration TSA asked the NRC for a study of emerging screening technologies This book the fourth of four focuses on data fusion as a means to significantly improve the ability of the existing suite of airport detection systems and access control systems to detect and prevent attacks The book presents a discussion of the data fusion an analysis of current data fusion efforts and an assessment of data fusion opportunities for various airport security activities
