

Clinical Aspects of Visceral Neurology with Special Reference to the Surgery of the Sympathetic Nervous System," covers a somewhat similar field, is outspoken on the subject of visceral pain. He believes that certain types of pain are intimately associated with the sympathetic nervous system and since such pain is mediated by afferent fibers passing in the sympathetic trunk it can not be completely abolished in an extremity by mere section of its somatic nerves.

In the clinical sections of the book, in which no extravagant claims are made, the pathological conditions and abnormal physiological states which may be cured or ameliorated by surgical procedures involving the autonomic nervous system are discussed. Peripheral vascular diseases, especially those which fall into the Raynaud's syndrome, are discussed at length and salutary results are recorded; relief from intractable pain, *e.g.*, of the extremities and of cardiac origin, is discussed and also the problem of hypertension. In discussing the gastro-intestinal tract White points out that Hirschsprung's disease in children may be dramatically benefited by sympathetic denervation. The final section relates to surgical procedures and to the technique of alcohol injection of sympathetic ganglia which White has done so much to develop. The book is provided with good bibliographies, clear illustrations and an excellent index.

THE THEORY OF VALENCY

The Optical Basis of the Theory of Valency. By R. DE L. KRONG, University of Groningen. The Macmillan Company, New York. x+246 pp. Price, \$4.50.

THIS new volume in the Cambridge Series of Physical Chemistry is an excellent general survey of the contributions of modern physics to the problem of chemical valence. For the chemically stable molecules x-ray and electron diffraction studies are available. The chemically unstable molecules, the chemists' free radicals, may be studied by spectroscopic methods, which are applicable also to the stable molecules, both diatomic and polyatomic, to the latter with ever-increasing success. All these studies are contributing to a quantitative picture of the configuration, shape, size and interatomic motions and forces of molecules. The author has stated the results of mathematical physical analyses of these problems, but without any detailed derivation. This constitutes at once an advantage and a limitation of the book. The beginner in this field and those specializing in other fields anxious to know, in general, what has been accomplished will find the book an excellent introduction. The basic material necessary to an understanding of the approach to chemical binding, as interpreted by Heitler-London, Slater-Pauling and Hund-Mulliken, is presented in outline. The stability of valence compounds as revealed by reaction rate theory is considered to lie outside the scope of the book. The editor of the series might bear this in mind when considering other volumes to be presented. The recent article by van Vleck and Sherman in *Reviews of Modern Physics* on "The Quantum Theory of Valence" is an illustration of a more advanced treatment of the subject to which this present volume forms a satisfactory introduction.

SOCIETIES AND MEETINGS

THE TENNESSEE ACADEMY OF SCIENCE

THE November meeting of the academy for 1935 was held on Friday and Saturday, November 29 and 30, at George Peabody College, Nashville, Tennessee.

The most noteworthy feature of the meeting was its generality. Twenty-five of the forty-three papers listed on the program were by representatives of twelve different schools: the University of Tennessee, a state college and a church college, in East Tennessee; Vanderbilt University, Peabody College, two state colleges, a church college and a city school in Middle Tennessee; two church colleges in West Tennessee; a high school in Kentucky. No two schools were of the same denomination. Seven papers were by representatives of five different departments of the state. The Tennessee Valley Authority contributed two papers, the U. S. Weather Bureau one, the National Park

Service one. The program committee classified the papers listed for the general section under fourteen branches of science—geology leading with five, biology next with three.

Ferns claimed chief attention at the session of the botanical section, Dr. L. R. Hester, chairman. Other subjects included trees, bryophytes, algae and fungi. Dr. George R. Gage, of Vanderbilt University, reported that the Dutch elm disease has not yet been detected in Tennessee.

The presidential address was delivered by Dr. George M. Hall, professor of geology, University of Tennessee, at the dinner at the Hermitage Hotel on Friday evening. His subject was "The Economical and Cultural Value of Geology." On Saturday afternoon, Professors Jesse M. Shaver and Aaron J. Sharp led an excursion in search of native ferns and mosses.
