Science And Literature Bridging The Two Cultures:

Science and Literature David L. Wilson, Zack R. Bowen, 2001 Social issues are not susceptible to scientific analysis alone and scientific developments generally have major societal impact This book shows that intelligent and constructive exchange can occur between a scientist and a humanist with potential benefit to both fields and to society at large John D Meakin professor emeritus of mechanical engineering University of Delaware Lucid interesting thought provoking and benignly contentious Thomas Jackson Rice professor of English University of South Carolina In this lively and provocative book a scientist and a humanities scholar attempt to build a bridge between the two cultures in which they work Addressing fundamental issues of human nature and the ability of science to understand it and using texts from the biblical Genesis to Brave New World they explore topics from ethics and social values to chaos theory With an eye on keeping the science accessible to all the book contains background chapters on concepts in science that feed into the analysis of literature That discussion leads to expanded consideration of some of the most compelling contemporary issues from new developments in the science of the brain and the nature of the mind to possible limitations on scientific knowledge in the natural and social sciences The authors then explore the use of scientific concepts and ideas in particular literary works they use Darwinian theories to extract insights from John Fowles s *The French Lieutenant s Woman* they use entropy Maxwell s demon and chaos theory to study Thomas Pynchon s *The Crying of Lot 49* and they confront the notion of scientific progress with artistic notions of patterns and cycles in W B Yeats s poetry Supplementing the basic discussion dialogues between the authors range over more controversial areas such as the question of free will and postmodern views of power knowledge and language Never allowing either of them to escape with trite or trivial statements the debates illustrate the extent to which commonalities and differences exist between their fields This entertaining and exceptionally timely book will enlighten both student and scholar no matter what their discipline David L Wilson professor of biology at the University of Miami is the author of *Introduction to Biology* and the author or coauthor of fifty research papers in *Journal of General Physiology* *Journal of Consciousness Studies* *Journal of Neurochemistry* *DNA and Cell Biology* and other publications Zack Bowen professor of English at the University of Miami has written nine books on modern and contemporary literature including *Bloom s Old Sweet Song* UPF 1995 He is editor of the *James Joyce Literary Supplement* and serves as editor of the University Press of Florida *James Joyce Series* and as general editor of the *Twayne Macmillan Critical Essays in British Literature Series*

Science Fiction and the Two Cultures Gary Westfahl, George Slusser, 2009-06-01 Essays in this volume demonstrate how science fiction can serve as a bridge between the sciences and the humanities The essays show how early writers like Dante and Mary Shelley revealed a gradual shift toward a genuine understanding of science how H G Wells first showed the possibilities of combining scientific and humanistic perspectives how writers influenced by Gernsback s ideas like Isaac Asimov illustrated the ways that literature could interact with science and assist in its progress and how more recent writers

offer critiques of science and its practitioners **Post-theory, Culture, Criticism** Ivan Callus, Stefan Herbrechter, 2004 No detailed description available for Post Theory Culture Criticism **Science Fact and Science Fiction** Brian Stableford, 2006-09-06 Science fiction is a literary genre based on scientific speculation Works of science fiction use the ideas and the vocabulary of all sciences to create valid narratives that explore the future effects of science on events and human beings Science Fact and Science Fiction examines in one volume how science has propelled science fiction and to a lesser extent how science fiction has influenced the sciences Although coverage will discuss the science behind the fiction from the Classical Age to the present focus is naturally on the 19th century to the present when the Industrial Revolution and spectacular progress in science and technology triggered an influx of science fiction works speculating on the future As scientific developments alter expectations for the future the literature absorbs uses and adapts such contextual visions The goal of the Encyclopedia is not to present a catalog of sciences and their application in literary fiction but rather to study the ongoing flow and counterflow of influences including how fictional representations of science affect how we view its practice and disciplines Although the main focus is on literature other forms of science fiction including film and video games are explored and because science is an international matter works from non English speaking countries are discussed as needed

Bridging Two Cultures Martha Cotera, Larry Hufford, 1980 *Literature and Science* Wai-chee Dimock, Priscilla Wald, 2002 The goal of this special issue of American Literature is to encourage scholars in both the sciences and the humanities to estrange themselves from their regular ways of thinking Committed to understanding what each discipline has to teach the other the contributors explore the changes in topics approaches and methodologies in the sciences technology and the humanities that surface when scholars take seriously the mandate to consider the basic assumptions of each field from the other point of view The essays address the mutual impact of literature and science through a range of issues geek novels as a subgenre of literature about science the relationship of narrative form to risk analysis and ecological disaster the impact of realism and contemporary developments in neurology and brain biology and the use of technology in the humanities The essays also examine how the humanities explore scientific issues such as in vitro fertilization and human existence cloning and molecular biology and the concept of time Contributors Jay Clayton Wai Chee Dimock N Katherine Hayles Ursula Heise Randall Knoper Martha Nell Smith Stephanie Turner Priscilla Wald Robyn Wiegman **Routledge Handbook of Art, Science, and Technology Studies** Hannah Rogers, Megan Halpern, Dehlia Hannah, Kathryn de Ridder-Vignone, 2021-12-22 Art and science work is experiencing a dramatic rise coincident with burgeoning Science and Technology Studies STS interest in this area Science has played the role of muse for the arts inspiring imaginative reconfigurations of scientific themes and exploring their cultural resonance Conversely the arts are often deployed in the service of science communication illustration and popularization STS scholars have sought to resist the instrumentalization of the arts by the sciences emphasizing studies of theories and practices across disciplines and the distinctive and

complementary contributions of each The manifestation of this commonality of creative and epistemic practices is the emergence of Art Science and Technology Studies ASTS as the interdisciplinary exploration of art science This handbook defines the modes practices crucial literature and research interests of this emerging field It explores the questions methodologies and theoretical implications of scholarship and practice that arise at the intersection of art and STS Further ASTS demonstrates how the arts are intervening in STS Drawing on methods and concepts derived from STS and allied fields including visual studies performance studies design studies science communication and aesthetics and the knowledge of practicing artists and curators ASTS is predicated on the capacity to see both art and science as constructions of human knowledge making Accordingly it posits a new analytical vernacular enabling new ways of seeing understanding and thinking critically about the world This handbook provides scholars and practitioners already familiar with the themes and tensions of art science with a means of connecting across disciplines It proposes organizing principles for thinking about art science across the sciences social sciences humanities and arts Encounters with art and science become meaningful in relation to practices and materials manifest as perceptual habits background knowledge and cultural norms As the chapters in this handbook demonstrate a variety of STS tools can be brought to bear on art science so that systematic research can be conducted on this unique set of knowledge making practices

The Two Cultures C. P. Snow,1993-07-30 The notion that our society its education system and its intellectual life is characterised by a split between two cultures the arts or humanities on one hand and the sciences on the other has a long history But it was C P Snow s Rede lecture of 1959 that brought it to prominence and began a public debate that is still raging in the media today This 50th anniversary printing of *The Two Cultures* and its successor piece *A Second Look* in which Snow responded to the controversy four years later features an introduction by Stefan Collini charting the history and context of the debate its implications and its afterlife The importance of science and technology in policy run largely by non scientists the future for education and research and the problem of fragmentation threatening hopes for a common culture are just some of the subjects discussed **History of Science and Technology in Education and Training in Europe**
