Selections From The First Two Issues:

Vehicle Propulsion Systems Lino Guzzella, Antonio Sciarretta, 2007-09-21 In this book the longitudinal behavior of road vehicles is analyzed. The main emphasis is on the analysis and minimization of the fuel and energy consumption. Most approaches to this problem enhance the complexity of the vehicle system by adding components such as electrical motors or storage devices. Such a complex system can only be designed by means of mathematical models. This text gives an introduction to the modeling and optimization problems typically encountered when designing new propulsion systems for passenger cars. It is intended for persons interested in the analysis and optimization of classical and novel vehicle propulsion systems. Its focus lies on the control oriented mathematical description of the physical processes and on the model based optimization of the system structure and of the supervisory control algorithms. This text has evolved from a lecture series at ETH Zurich. Prerequisites are general engineering topics and a first course in optimal control theory. **Middleware 2009**

Jean M. Bacon, Valérie Issarny, Brian F. Cooper, 2009-11-06 This book constitutes the proceedings of the 10th International Conference on Middleware held in Urbana IL USA during November 30 December 4. The 21 papers presented have been selected from 110 submissions. The papers are organized in topical sections on communications protocols and optimization service component composition adaption monitoring pervasive stream processing failure resilience and support for testing.

Scaffolding: Selected Contributions of James R. Griesemer to History, Philosophy, and Biology Rachel A. Ankeny, Michael R. Dietrich, Sabina Leonelli, 2025-06-27 This book brings together some of Griesemer's most significant contributions for the first time making it widely accessible in a single collection. Throughout his career James Griesemer has created an intellectual scaffold for major advances in the history and philosophy of biology. His analyses of boundary objects, units of selection, reproducers, models and scaffolds have served and continue to serve as sites of innovation for philosophers, historians and biologists. Griesemer's oeuvre does not form a mere collection of important essays on disparate and disconnected topics. His works are best understood as units in a large philosophical puzzle amounting to an overarching vision of how humans understand life and use that understanding for intervention which in turn is grounded in a highly sophisticated historical and scientific understanding of the research practices in question. With edits, comments and an in depth introduction, this book is of great interest to historians and philosophers of biology as well as science in general.

Modeling and Selection of Software Service Variants Wittern, John Erik, 2015-05-29 Providers and consumers have to deal with variants of software services which are alternative instances of a service's design, implementation, deployment or operation. This work develops the service feature modeling language to represent software service variants and a suite of methods to select variants for development or delivery. An evaluation describes the systems implemented to make use of service feature modeling and its application to two real world use cases. *The Blackwell Handbook of Personnel Selection*
