Self Organization Emerging Properties And Learning:

Self-Organization, Emerging Properties, and Learning Agnessa Babloyantz, 2012-12-06 This volume contains the proceedings of the workshop held in March 1990 at Austin Texas on Self Organization Emerging Properties and Learning The workshop was co sponsored by NATO Scientific Affairs Division Solvay Institutes of Physics and Chemistry the University of Texas at Austin and IC2 Institute at Austin It gathered representatives from a large spectrum of scientific endeavour The subject matter of self organization extends over several fields such as hydrodynamics chemistry biology neural networks and social sciences Several key concepts are common to all these different disciplines In general the self organization processes in these fields are described in the framework of the nonlinear dynamics which also governs the mechanisms underlying the learning processes Because of this common language it is expected that any progress in one area could benefit other fields thus a beneficial cross fertilization may result In last two decades many workshops and conferences had been organized in various specific fields dealing with self organization and emerging properties of systems The aim of the workshop in Austin was to bring together researchers from seemingly unrelated areas and interested in self organization emerging properties and learning capabilities of interconnected multi unit systems The hope was to initiate interesting exchange and lively discussions The expectations of the organizers are materialized in this unusual collection of papers which brings together in a single volume representative research from many related fields Thus this volume gives to the reader a wider perspective over the generality and ramifications of the key concepts of self organization

Bhatara, Petri Laukka, Daniel J. Levitin, 2014-08-18 Two of the most important social skills in humans are the ability to determine the moods of those around us and to use this to guide our behavior To accomplish this we make use of numerous cues Among the most important are vocal cues from both speech and non speech sounds Music is also a reliable method for communicating emotion It is often present in social situations and can serve to unify a group s mood for ceremonial purposes funerals weddings or general social interactions Scientists and philosophers have speculated on the origins of music and language and the possible common bases of emotional expression through music speech and other vocalizations They have found increasing evidence of commonalities among them However the domains in which researchers investigate these topics do not always overlap or share a common language so communication between disciplines has been limited The aim of this Research Topic is to bring together research across multiple disciplines related to the production and perception of emotional cues in music speech and non verbal vocalizations This includes natural sounds produced by human and non human primates as well as synthesized sounds Research methodology includes survey behavioral and neuroimaging techniques investigating adults as well as developmental populations including those with atypical development Studies using laboratory tasks as well as studies in more naturalistic settings are included Artificial Life , 1998 Consists of the
