Selected Papers Errett Bishop, 1986 Errett Bishop's mathematical work was divided between complex and functional analysis and constructive mathematics The influence of his discoveries in these areas is still strongly felt today *Selected Papers Of Errett Bishop*, 1986-12-01 Errett Bishop's mathematical work was divided between complex and functional analysis and constructive mathematics The influence of his discoveries in these areas is still strongly felt today **Topics in Mathematical Analysis and Differential Geometry** Nicolas K. Laos, 1998 This book studies the interplay between mathematical analysis and differential geometry as well as the foundations of these two fields The development of a unified approach to topological vector spaces differential geometry and algebraic and differential topology of function manifolds led to the broad expansion of global analysis This book serves as a self contained reference on both the prerequisites for further study and the recent research results which have played a decisive role in the advancement of global analysis Goldbach Conjecture, 2nd Edition Yuan Wang, 2002-11-20 This book provides a detailed description of a most important unsolved mathematical problem the Goldbach conjecture Raised in 1742 in a letter from Goldbach to Euler this conjecture attracted the attention of many mathematical geniuses Several great achievements were made but only until the 1920 s The book gives an exposition of these results and their impact on mathematics particularly number theory It also presents partly or wholly selections from important literature so that readers can get a full picture of the conjecture **The Goldbach Conjecture** Yuan Wang, 2002 This book provides a detailed description of a most important unsolved mathematical problem OCo the Goldbach conjecture Raised in 1742 in a letter from Goldbach to Euler this conjecture attracted the attention of many mathematical geniuses Several great achievements were made but only until the 1920 s The book gives an exposition of these results and their impact on mathematics particularly number theory It also presents partly or wholly selections from important literature so that readers can get a full picture of the conjecture Introduction to the Theory of Complex Functions Jian-Ke Lu, Shou-Guo Zhong, Shi-Qiang Liu, 2002 This book is based on the teaching experience of the authors and therefore some of the topics are presented in a new form For instance the multi valued properties of the argument function are discussed in detail so that the beginner may readily grasp the elementary multi valued analytic functions The residue theorem is extended to the case where poles of analytic functions considered may occur on the boundary of a region which is very useful in applications but not seen in textbooks written in English **Complex Variable Methods In Plane Elasticity** Jian-ke Lu, 1995-09-30 This book deals systematically with the mathematical theory of plane elasto statics by using complex variable methods together with many results originated by the author The problems considered are reduced to integral equations Fredholm or singular which are rigorously proved to be uniquely solvable Particular attention is paid to the subjects of crack problems in the quite general case especially those of composite media which are solved by a unified method The methods used in this book are constructive so that they may be used in practice Translation Generalized

Quadrangles Joseph Adolf Thas, Koen Thas, H. van Maldeghem, 2006 Translation generalized quadrangles play a key role in the theory of generalized quadrangles comparable to the role of translation planes in the theory of projective and affine planes The notion of translation generalized quadrangle is a local analogue of the more global OC Moufang Condition OCO a topic of great interest also due to the classification of all Moufang polygons Attention is thus paid to recent results in that direction but also many of the most important results in the general theory of generalized quadrangles that appeared since 1984 are treated Translation Generalized Quadrangles is essentially self contained as the reader is only expected to be familiar with some basic facts on finite generalized quadrangles Proofs that are either too long or too technical are left out or just sketched The three standard works on generalized quadrangles are co authored by the writers of this book OC Finite Generalized Quadrangles OCO 1984 by S E Payne and J A Thas OC Generalized Polygons OCO 1998 by H Van Maldeghem and OC Symmetry in Finite Generalized Quadrangles OCO 2004 by K Thas Sample Chapter s Chapter 1 Generalized Quadrangles 127 KB Contents Generalized Quadrangles Regularity Antiregularity and 3 Regularity Elation and Translation Generalized Quadrangles Generalized Quadrangles and Flocks Good Eggs Generalized Quadrangles Nets and the Axiom of Veblen Ovoids and Subquadrangles Translation Generalized Ovals Moufang Sets and Translation Moufang Sets Configurations of Translation Points Moufang Quadrangles with a Translation Point Translation Ovoids in Translation Quadrangles Translation Generalized Quadrangles in Projective Space Open Problems Readership Researchers in incidence geometry combinatorics and finite geometries Also suitable as a textbook for a graduate course

Structuralism And Structures Charles E Rickart, 1995-02-20 This book is devoted to an analysis of the way that structures must enter into a serious study of any subject and the term structuralism refers to the general method of approaching a subject from the viewpoint of structure A proper appreciation of this approach requires a deeper understanding of the concept of structure than is provided by the simple intuitive notion of structures that everyone possesses to some degree Therefore a large part of the discussion is devoted directly or indirectly to a study of the nature of structures themselves A formal definition of a structure plus some basic general properties and examples is given early in the discussion Also in order to clarify the general notions and to see how they are used the later chapters are devoted to an examination of how structures enter into some special fields including linguistics mental phenomena mathematics and its applications and biology especially in the theory of evolution Because the author is a mathematician certain mathematical ideas have influenced greatly the choice and approach to the material covered In general however the mathematical influence is not on a technical level and is often only implicit Even the chapter on mathematical structures is nontechnical and is about rather than on mathematics Only in the last chapter and earlier in three short sections does one find any of the expected formal mathematics In other words the great bulk of the material is accessible to someone without a mathematical background

Errett Bishop Murray Rosenblatt, 1985 This book is the proceedings of the Memorial Meeting for Errett Bishop held at the University of California San Diego 24 September 1983

During his early days as a mathematician Errett Bishop made distinguished contributions in many branches of analysis first in operator theory in Hilbert and Banach spaces then in the theory of polynomial approximation in the complex plane and on Riemann surfaces and thence to his outstanding research in function algebras This work in turn led him to his highly original approach to the theory of functions of several complex variables About 1964 Bishop turned his interests toward the foundations of mathematics Whereas L E J Brouwer s intuitionism took as basic the integers and the real numbers Bishop proposed that the integers are the only basic irreducible mathematical construct His remarkable 1968 book Foundations of Constructive Analysis was devoted to the development of a large part of modern analysis suitably modified on this one concept The object of the present book is to present a view of Errett Bishop who died suddenly in 1983 at the age of 54 as a human being a colleague and a mathematician An eloquent statement of his philosophy is contained in his paper Schizophrenia in Contemporary Mathematics which resulted from his AMS Colloquium Lectures in 1973 and which occupies about one third of the book

Almost Complex and Complex Structures C. C. Hsiung, 1995 This book gives a self contained fundamental study of the subject Besides the following special features it contains the author s detailed solution to the long standing unsolved problem in the theory of complex manifolds Does there exist a complex structure on the six sphere The special features of the book are a classification of almost complex and similarly almost Hermitian structures together with inclusion relations discussions about various known almost Hermitian structures a necessary and sufficient condition for a general almost Hermitian manifold to have constant holomorphic sectional or bisectional curvature and similar conditions for various special almost Hermitian manifolds some complex Laplacians together with some of their relationships with the real Laplacian the spectral geometry of Riemannian manifolds and some general almost Hermitian manifolds including K hlerian manifolds as a special case conditions for an almost complex structure to be a complex structure some vanishing theorems for Riemannian and almost Hermitian manifolds
