## **Selective Sweep:**

Selective Sweep Dmitry I. Nurminsky, 2007-07-16 Selective Sweep deals with the theory and practice of detection of recent adaptive evolution at the genomic level from the patterns of DNA polymorphism Recent advances in genomic sequencing provide the background for analysis of polymorphic sites in large chromosomal regions or even in whole genome thus providing the tool for effective identification of loci that are under strong pressure of positive selection For this reason the studies of selective sweep which formerly were of interest mostly to evolutionists have become widely recognized and appreciated by the large biological community involved in identification of the targets of selection during speciation host pathogen interactions and resistance to chemical agents

**Computational Biology** Frank Eisenhaber, 2007-03-20 This anthology presents critical reviews of methods and high impact applications in computational biology that lead to results that non bioinformaticians must also know to design efficient experimental research plans Discovering Biomolecular Mechanisms with Computational Biology explores the methodology of translating sequence strings into biological knowledge and considers exemplary groundbreaking results such as unexpected enzyme discoveries This book also summarizes non trivial theoretical predictions for regulatory and metabolic networks that have received experimental confirmation

## **Phylogenomics** Rob DeSalle, Michael Tessler, Jeffrey Rosenfeld, 2020-08-18

Phylogenomics A Primer Second Edition is for advanced undergraduate and graduate biology students studying molecular biology comparative biology evolution genomics and biodiversity This book explains the essential concepts underlying the storage and manipulation of genomics level data construction of phylogenetic trees population genetics natural selection the tree of life DNA barcoding and metagenomics The inclusion of problem solving exercises in each chapter provides students with a solid grasp of the important molecular and evolutionary questions facing modern biologists as well as the tools needed to answer them

*Breeding Forage and Grain Legumes for Sustainable Protein Production* Åshild Ergon, Leif Skot, Deyue Yu, Thomas Wood, 2025-08-27 The legume family Fabaceae is an important plant family for the provision of food and feed Legumes have symbiosis with nitrogen fixing bacteria giving them highly valuable agronomic characteristics reduced needs for fertilizer application products with a high protein content and improved agronomic environmental and economic sustainability Less investments have been made in breeding of improved varieties of grain and forage legumes compared to grain and forage species in the grass family In order to fulfill the protein needs of the future and make use of the advantages that legumes can provide it is necessary to develop efficient breeding strategies for the legume crops and improve diversification crop productivity yield stability and protein quality of the products This Research Topic aims to gather key contributions resulting from a Horizon 2020 project EUCLEG Breeding Forage and Grain Legumes to Increase EU s and China s Protein Self Sufficiency We welcome all article types falling under the following topics Development of molecular marker resources and genotyping tools for breeding purposes Genetic resources characterization of genetic variation

structure and accessibility to data and seeds in gene banks Characterization of traits and its variation phenotyping methodology and genetic control of traits Development of new breeding methods We acknowledge the initiation of this Research Topic by the EUCLEG Breeding Forage and Grain Legumes to Increase EU s and China s Protein Self Sufficiency Horizon 2020 project Dr shild Ergon is responsible for the contribution from the Norwegian University of Life Sciences Dr Leif Sk t is responsible for the contribution from Aberystwyth University and Dr Deyue Yu is responsible for the contribution from Nanjing Agricultural University Dr Thomas Henry Noel Ellis and Dr Thomas Wood are not participants of the EUCLEG project

A Primer of Population Genetics and Genomics Daniel L. Hartl,2020-06-18 A Primer of Population Genetics and Genomics has been completely revised and updated to provide a concise but comprehensive introduction to the basic concepts of population genetics and genomics Recent textbooks have tended to focus on such specialized topics as the coalescent molecular evolution human population genetics or genomics This primer bucks that trend by encouraging a broader familiarity with and understanding of population genetics and genomics as a whole The overview ranges from mating systems through the causes of evolution molecular population genetics and the genomics of complex traits Interwoven are discussions of ancient DNA gene drive landscape genetics identifying risk factors for complex diseases the genomics of adaptation and speciation and other active areas of current research The principles are illuminated by numerous examples from a wide variety of animals plants microbes and human populations The approach also emphasizes learning by doing which in this case means solving numerical or conceptual problems The rationale behind this is that the use of concepts in problem solving lead to deeper understanding and longer knowledge retention This accessible introductory textbook is aimed principally at students of various levels and abilities from senior undergraduate to postgraduate as well as practising scientists in the fields of population genetics ecology evolutionary biology computational biology bioinformatics biostatistics physics and mathematics
