Semantics Foundations And Applications Lecture Notes In Computer Science 666:

<u>Theory And Formal Methods Of Computing 94: Proceedings Of The Second Imperial College Workshop</u> Chris Hankin,I Mackie,Rajagopal Nagarajan,1995-10-17 The focus of this workshop was the development of mathematically based techniques of formal specification of system behaviour and the systematic development of implementations The aim is to produce correct efficient implementations in a reliable fashion Topics covered at the workshop include category theory logic domain theory semantics concurrency specification and verification The papers published here range from the purely theoretical to practical applications   <u>Algebraic Methodology and Software Technology</u> V.S. Alagar,Maurice Nivat,1995-05-21 This volume constitutes the proceedings of the 4th International Conference on Algebraic Methodology and Software Technology held in Montreal Canada in July 1995 It includes full papers or extended abstracts of the invited talks refereed selected contributions and research prototype tools The invited speakers are David Gries Jeanette Wing Dan Craigen Ted Ralston Ewa Orlowska Krzysztof Apt Joseph Goguen and Rohit Parikh The 29 refereed papers presented were selected from some 100 submissions they are organized in sections on algebraic and logical foundations concurrent and reactive systems software technology logic programming and databases   *Analysis and Verification of Multiple-Agent Languages* Mads Dam,1997-01-07 This book originates from the 5th LOMAPS Workshop on Analysis and Verification of Multiple Agent Languages held in Stockholm Sweden in June 1996 LOMAPS is an ESPRIT project devoted to program analysis and verification techniques applicable to emerging multi paradigm programming languages The volume presents 14 revised full papers selected from the workshop submissions together with 4 invited contributions also included is an introductory overview surveying the state of the art in the area and putting the contributions into this context

Comparative Metric Semantics of Programming Languages Franck van Breughel,2012-12-06 During the last three decades several different styles of semantics for program ming languages have been developed This book compares two of them the operational and the denotational approach On the basis of several exam ples we show how to define operational and denotational semantic models for programming languages Furthermore we introduce a general technique for comparing various semantic models for a given language We focus on different degrees of nondeterminism in programming lan guages Nondeterminism arises naturally in concurrent languages It is also an important concept in specification languages In the examples discussed the degree of non determinism ranges from a choice between two alternatives to a choice between a collection of alternatives indexed by a closed interval of the real numbers The former arises in a language with nondeterministic choices A real time language with dense choices gives rise to the latter We also consider the nondeterministic random assignment and parallel composition both couched in a simple language Besides non determinism our four example languages contain some form of recursion a key ingredient of programming languages   **ML with Concurrency** Flemming Nielson,2012-12-06 Both functional and concurrent programming are relatively new paradigms with

great promise In this book a survey is provided of extensions to Standard ML one of the most widely used functional languages with new primitives for concurrent programming Computer scientists and graduate students will find this a valuable guide to this topic   *Mathematical Foundations of Computer Science* ,1998   Axiomatic Domain Theory in Categories of Partial Maps Marcelo P. Fiore,2004-03-25 First systematic account of axiomatic categorical domain theory and functional programming   **Algebraic Methodology and Software Technology** ,1995   *Handbook of Process Algebra* J.A. Bergstra,A. Ponse,S.A. Smolka,2001-03-16 Process Algebra is a formal description technique for complex computer systems especially those involving communicating concurrently executing components It is a subject that concurrently touches many topic areas of computer science and discrete math including system design notations logic concurrency theory specification and verification operational semantics algorithms complexity theory and of course algebra This Handbook documents the fate of process algebra since its inception in the late 1970 s to the present It is intended to serve as a reference source for researchers students and system designers and engineers interested in either the theory of process algebra or in learning what process algebra brings to the table as a formal system description and verification technique The Handbook is divided into six parts spanning a total of 19 self contained Chapters The organization is as follows Part 1 consisting of four chapters covers a broad swath of the basic theory of process algebra Part 2 contains two chapters devoted to the sub specialization of process algebra known as finite state processes while the three chapters of Part 3 look at infinite state processes value passing processes and mobile processes in particular Part 4 also three chapters in length explores several extensions to process algebra including real time probability and priority The four chapters of Part 5 examine non interleaving process algebras while Part 6 s three chapters address process algebra tools and applications   Category Theory for Computing Science Michael Barr,Charles Wells,1995 A wide coverage of topics in category theory and computer science is developed in this text including introductory treatments of cartesian closed categories sketches and elementary categorical model theory and triples Over 300 exercises are included   Principles and Practice of Constraint Programming ,1995   *Category Theory and Computer Science* ,1995   **Principles and Practice of Declarative Programming** ,2001   **Names and Higher-order Functions** Ian Stark,1995 Abstract Many functional programming languages rely on the elimination of impure features assignment to variables exceptions and even input output But some of these are genuinely useful and it is of real interest to establish how they can be reintroduced sic in a controlled way This dissertation looks in detail at one example of this the addition to a functional language of dynamically generated names Names are created fresh they can be compared with each other and passed around but that is all As a very basic example of state they capture the graduation between private and public local and global by their interaction with higher order functions The vehicle for this study is the nu calculus an extension of the simply typed lambda calculus The nu calculus is equivalent to a certain fragment of Standard ML omitting side effects exceptions datatypes and recursion Even without all these features the interaction of

name creation with higher order functions can be complex and subtle Various operational and denotational methods for reasoning about the nu calculus are developed These include a computational metalanguage in the style of Moggi which distinguishes in the type system between values and computations This leads to categorical models that use a strong monad and examples are devised based on functor categories The idea of logical relations is used to derive powerful reasoning methods that capture some of the distinction between private and public names These techniques are shown to be complete for establishing contextual equivalence between first order expressions they are also used to construct a correspondingly abstract categorical model All the work with the nu calculus extends cleanly to Reduced ML a larger language that introduces integer references mutable storage cells that are dynamically allocated It turns out that the step up is quite simple and both the computational metalanguage and the simple categorical models can be reused **Foundations of Secure Computation** Friedrich L. Bauer,Ralf Steibrüggen,2000 Programming Languages and Systems ,1994 **Report CS-R** ,1994 日本アルコール・バイオマスエネルギー協会 会報・研究 (Japan),1900 Subject Guide to Books in Print ,1991 Nordic Journal of Computing ,1995
