Making Things Work Solving Complex Problems In A Complex World:

Making Things Work Yaneer Bar-Yam, 2004 The science of complexity has revolutionized our understanding of everything from the brain to the economy to the weather This book shows how it can change the way we approach our most persistent social problems It introduces key concepts like emergence self organization and networks and uses them to propose novel solutions to problems that affect us all Suitable for anyone struggling to cope with complex challenges Written by Yaneer Bar Yam the leading expert in the use of complexity science in solving real world problems in healthcare education military engineering ethnic violence and terrorism , *Command and Control: The Sociotechnical Perspective* Guy H Walker, Neville A. Stanton, Daniel P. Jenkins, 2017-09-18 Military command and control is not merely evolving it is co evolving Technology is creating new opportunities for different types of command and control and new types of command and control are creating new aspirations for technology The question is how to manage this process how to achieve a jointly optimised blend of socio and technical and create the kind of agility and self synchronisation that modern forms of command and control promise The answer put forward in this book is to re visit sociotechnical systems theory In doing so the problems of 21st century command and control can be approached from an alternative multi disciplinary and above all human centred perspective Human factors HF is also co evolving The traditional conception of the field is to serve as a conduit for knowledge between engineering and psychology yet 21st century command and control presents an altogether different challenge Viewing military command and control through the lens of sociotechnical theory forces us to confront difficult questions about the non linear nature of people and technology technology is changing from platform centric to network centric the interaction with that technology is changing from prescribed to exploratory and complexity is increasing from behaviour that is linear to that which is emergent The various chapters look at this transition and draw out ways in which sociotechnical systems theory can help to understand it The sociotechnical perspective reveals itself as part of a conceptual toolkit through which military command and control can be transitioned from notions of bureaucratic hierarchical ways of operating to the devolved agile self synchronising behaviour promised by modern forms of command and control like Network Enabled Capability NEC Sociotechnical system theory brings with it a sixty year legacy of practical application and this real world grounding in business process re engineering underlies the entire book An attempt has been made to bring a set of sometimes abstract but no less useful principles down to the level of easy examples design principles evaluation criteria and actionable models All of these are based on an extensive review of the current state of the art new sociotechnical NEC studies conducted by the authors and insights derived from field studies of real life command and control Time and again what emerges is a realisation that the most agile self synchronising component of all in command and control settings is the human *Social Computing and Behavioral Modeling* Huan Liu, John Salerno, Michael J. Young, 2009-04-05 Social computing is concerned with the study of social behavior and social context based on computational systems Behavioral

modeling reproduces the social behavior and allows for experimenting scenario planning and deep understanding of behavior patterns and potential outcomes The pervasive use of computer and Internet technologies provides an unprecedented environment of various social activities Social computing facilitates behavioral modeling in model building analysis pattern mining and prediction Numerous interdisciplinary and interdependent systems are created and used to represent the various social and physical systems for investigating the interactions between groups communities or nations This requires joint efforts to take advantage of the state of the art research from multiple disciplines social computing and behavioral modeling in order to document lessons learned and develop novel theories experiments and methodologies in terms of social physical psychological and governmental mechanisms The goal is to enable us to experiment create and recreate an operational environment with a better understanding of the contributions from each individual discipline forging joint interdisciplinary efforts This is the second international workshop on Social Computing Behavioral Modeling and Prediction The submissions were from Asia Australia Europe and America Since SBP09 is a single track workshop we could not accept all the good submissions The accepted papers cover a wide range of interesting topics
