Managing Service Level Quality Peter Massam, 2003-04-11 QoS Quality of Service and Network Management are old topics However the fusion of IP style multimedia and wireless networks 3G means that network managers who might previously have dealt with one or the other must now manage and provide service guarantees for the both This is where Managing Service Level Quality across Wireless and Fixed Networks steps in It begins by examining the mechanisms that already existed in fixed IP data networks prior to the introduction of probe and agent technology A look at these later developments is then supplemented with a real world scenario of how real time application performance monitoring can not only provide service level management but can also aid in root cause analysis This same model is then applied to a wireless environment examining which elements are required to be able to deliver multimedia services across 2nd and 3rd generation mobile networks detailing the components of data networking that will assist in guaranteeing service level performance and the constraints placed on those guarantees when passing services over an air interface to a wireless enabled device It asks a simple question will multimedia applications and the guaranteed levels of service required by them work when traversing from fixed to wireless networks It tracks QoS components and mechanisms of both environments and looks at what will provide the glue in this brave new converged world and also provides empirical data to back up the conclusions drawn First book available which applies QoS techniques and technologies to wireless mobile networks 3G UMTS Deals with the search for the real time information that constitutes the

customer experience in terms of application performance so that service levels can be verified against measurable and relevant data in a true end to end manner across both fixed and wireless networks Presents probe and agent technology Features a real world scenario of how real time application performance monitoring can not only provide service level management but can also aid in root cause analysis this will be of particular interest to practitioner Analyses which elements are required in order to deliver multimedia services across 2nd and 3rd generation mobile networks Details the components of data networking that will assist in guaranteeing service level performance Essential reading for Wireless and IP data network professionals practitioners network managers and architects technical consultants quality assessment engineers infrastructure vendors application developers portal designers wireline operators lecturers postgraduates senior undergraduate students and industry trainees

Traffic Engineering with MPLS Eric D. Osborne, Ajay Simha, 2002

Design configure and manage MPLS TE to optimize network performance Almost every busy network backbone has some congested links while others remain underutilized That s because shortest path routing protocols send traffic down the path that is shortest without considering other network parameters such as utilization and traffic demands Using Traffic Engineering TE network operators can redistribute packet flows to attain more uniform distribution across all links Forcing traffic onto specific pathways allows you to get the most out of your existing network capacity while making it easier to deliver consistent service levels to customers at the same time Cisco r Multiprotocol Label Switching MPLS lends efficiency to very large networks and is the most effective way to implement TE MPLS TE routes traffic flows across the network by aligning resources required by a given flow with actual backbone capacity and topology This constraint based routing approach feeds the network route traffic down one or more pathways preventing unexpected congestion and enabling recovery from link or node failures Traffic Engineering with MPLS provides you with information on how to use MPLS TE and associated features to maximize network bandwidth This book focuses on real world applications from design scenarios to feature configurations to tools that can be used in managing and troubleshooting MPLS TE Assuming some familiarity with basic label operations this guide focuses mainly on the operational aspects of MPLS TE how the various pieces work and how to configure and troubleshoot them Additionally this book addresses design and scalability issues along with extensive deployment tips to help you roll out MPLS TE on your own network Understand the background of TE and MPLS and brush up on MPLS forwarding basics Learn about router information distribution and how to bring up MPLS TE tunnels in a network Understand MPLS TE s Constrained Shortest Path First CSPF and mechanisms you can use to influence CSPF s path calculation Use the Resource Reservation Protocol RSVP to implement Label Switched Path setup Use various mechanisms to forward traffic down a tunnel Integrate MPLS into the IP quality of service QoS spectrum of services Utilize Fast Reroute FRR to mitigate packet loss associated with link and node failures Understand Simple Network Management Protocol SNMP based measurement and accounting services that are available for MPLS Evaluate design scenarios for scalable MPLS TE

deployments Manage MPLS TE networks by examining common configuration mistakes and utilizing tools for troubleshooting MPLS TE problems Eric and Ajay work in the development group at Cisco that built Traffic Engineering They are among those with the greatest hands on experience with this application This book is the product of their experience George Swallow Cisco Systems Architect for Traffic Engineering Co Chair IETF MPLS Working Group Eric Osborne CCIE r 4122 has been doing Internet engineering of one sort or another since 1995 He joined Cisco in 1998 to work in the Cisco Technical Assistance Center TAC moved from there to the ISP Expert team and then to the MPLS Deployment team He has been involved in MPLS since the Cisco IOS r Software Release 11 1CT days Ajay Simha CCIE 2970 joined the Cisco TAC in 1996 He then went on to support tier 1 and 2 ISPs as part of Cisco s ISP Expert team Ajay has been working as an MPLS deployment engineer since October 1999 and he has first hand experience in troubleshooting designing and deploying MPLS

Policy Based Network Management PBNM systems enable business rules and procedures to be translated into policies that configure and control the network and its services Those who manage network systems are aware that this approach can benefit both network management as well as the development of applications that use network services however the details surrounding these systems has been obscured by marketing hype numerous acronyms and theoretical complexities Policy Based Network Management Solutions for the Next Generation cuts through the hype surrounding PBNM and makes it approachable for those who really need to understand what it has to offer The author founder of the IETF Policy Framework working group discusses system requirements information models and system components for Policy Based Management He also provide practitioners with a resource for developing and or incorporating PBNM systems As network systems become

larger and more complex creating policies for them has become a crucial step in the management of network systems and this book is a welcome addition to this exciting approach Presents a completely new approach to PBNM that unites the business system and implementation spheres As the basis for examples and discussion uses the DEN ng information model an easy to understand open standard tied closely to eTOM and NGOSS Introduces the Ponder system then examines Ponder extensions designed to enhance the structure of high level policies and their application in a PBNM system Filled with examples illustrating how policies are most effectively used in a PBNM system and what new directions PBNM is likely to take
