for the production of good quality radiographs from properly exposed x-ray film*

Principles of RADIOGRAPHIC EXPOSURE and PROCESSING

ARTHUR W. FUCHS

SECOND EDITION

NINTH PRINTING

Describes a simple though exact exposure system which is based upon proved fundamental theories and practices. Wherever possible, the exposure factors have been reduced to constants, thereby eliminating many sources of possible error.

Discusses in detail the operations necessary to the correct handling and chemical treatment of exposed x-ray film to convert it to a radiograph.

Stresses that correct processing is an important function in radiography because uniformity in result is dependent not only upon the exposure technic employed but also upon the care with which the film is processed.
