MODEL THEORY, ARITHMETIC & ALGEBRAIC GEOMETRY

JOEL TORRES DEL VALLE

1. LANGUAGES AND STRUCTURES.

1.1. What is Model Theory?

Model Theory is the study of the relationship between theories and mathematical structures which satisfies them [11]. Model Theory introduces Mathematical Logic in the practice of Universal Algebra, so we can think it like

$$\text{Model Theory} = \text{Universal Algebra} + \text{Mathematical Logic}.$$

I started this pages with the same question Chang-Keisler started their celebrated book [3]: 'What is Model Theory?' They also summarize the answer to the equation above. In this pages I summarize the relationship between Model Theory, Arithmetic and Algebraic Geometry. The topics will be the basic ones in the area, so this is just an invitation, in the presentation of topics I mainly follow the philosophy of the references, my basic reference is [9]. The early pioneers in Model Theory were Leopold Löwenheim in 1915, in his work 'Über Möglichkeiten im Relativkalkül'[1] there he proved that if a first order theory T that has an infinite model then has a countable model. Thoralf Skolem in 1920 proved a second version of Löwenheim result, in his work 'Logisch-kombinatorische Untersuchungen über die Erfüllbarkeit oder Beweisbarkeit mathematischer Sätze nebst einem Theoreme über dichte Mengen'[2].

Kurt Gödel in 1930 proved his Completeness and Compactness Theorems for countable languages in his Doctoral dissertation at the University of Viena titled 'Die Vollständigkeit der Axiome des logischen Funktionenkalküls'[3]. Alfred Tarski in 1931 proved a third version of Löwenheim result and Anatoly Maltsev in 1936 extended Gödel's Theorems for non-countable languages and showed the existence of non-standard models of Arithmetic by Compactness, a proof which resulted easier than Skolem's one that used Gödel's Incompleteness Theorems (Gödel proved them in 1931 in his work 'Über formal unentscheidbare Sätze der Principia Mathematica und verwandter systeme I'[4]; and Skolem proved the existence of non-standard models in 1934 in a work titled 'Über die Nicht-charakterisierbarkeit der Zahlenreihe mittels endlich oder abzählbar unendlich vieler Aussagen mit ausschließlich

Model Theory And Algebraic Geometry:

   Model Theory and Algebraic Geometry Elisabeth Bouscaren,2009-03-14 This introduction to the recent exciting developments in the applications of model theory to algebraic geometry illustrated by E Hrushovski s model theoretic proof of the geometric Mordell Lang Conjecture starts from very basic background and works up to the detailed exposition of Hrushovski s proof explaining the necessary tools and results from stability theory on the way The first chapter is an informal introduction to model theory itself making the book accessible with a little effort to readers with no previous knowledge of model theory The authors have collaborated closely to achieve a coherent and self contained presentation whereby the completeness of exposition of the chapters varies according to the existence of other good references but comments and examples are always provided to give the reader some intuitive understanding of the subject *Lectures on Algebraic Model Theory* Bradd T. Hart,Matthew Valeriote,2002 This thin volume contains three sets of lecture notes representing recent developments in differential scales o minimality and tame convergence theory The first lecture outlines the basics of differential fields and then addresses topics like differential varieties and tangent bundles Kolchin s logarithmic derivative and Manin s construction The second describes added exponentation T convexity and tame extensions piecewise linearity the Wilkie inequality and the valuation property And the third considers the structure and varieties of finite algebra No index c Book News Inc Model Theory, Algebra, and Geometry Deirdre Haskell,Anand Pillay,Charles Steinhorn,2000-07-03 Model theory has made substantial contributions to semialgebraic subanalytic p adic rigid and diophantine geometry These applications range from a proof of the rationality of certain Poincare series associated to varieties over p adic fields to a proof of the Mordell Lang conjecture for function fields in positive characteristic In some cases such as the latter it is the most abstract aspects of model theory which are relevant This book originally published in 2000 arising from a series of introductory lectures for graduate students provides the necessary background to understanding both the model theory and the mathematics behind these applications The book is unique in that the whole spectrum of contemporary model theory stability simplicity o minimality and variations is covered and diverse areas of geometry algebraic diophantine real analytic p adic and rigid are introduced and discussed all by leading experts in their fields **Model Theory and Algebraic Geometry** Elisabeth Bouscaren,2014-09-01 Model Theory of Fields David Marker,Margit Messmer,Anand Pillay,1996-01-01 The model theory of fields is an area for important interactions between mathematical logical and classical mathematics Recently there have been major applications of model theoretic ideas to real analytic geometry and diophantine geometry This book provides an introduction to this fascinating subject In addition to introducing the basic model theory of the fields of real and complex numbers we concentrate on differential fields and separably closed fields the two theories used in Hrushovski s proof of the Mordell Lang conjecture for function fields This book is of interest to graduate students in either logic or in related areas of mathematics such as differential algebra or real algebraic geometry **Model Theory with**
