Modelling Cognition:

An Interdisciplinary Approach to Cognitive Modelling Partha Ghose, Sudip Patra, 2023-12-05 An Interdisciplinary Approach to Cognitive Modelling presents a new approach to cognition that challenges long held views It systematically develops a broad based framework to model cognition which is mathematically equivalent to the emerging quantum like modelling of the human mind The book argues that a satisfactory physical and philosophical basis of such an approach is missing a particular issue being the application of quantization to the mind for which there is no empirical evidence as yet In response to this issue the book adopts a COM classical optical modelling approach broad based but mathematically equivalent to quantum like modelling while avoiding its problematic features It presents a philosophically informed and empirically motivated mathematical model of cognition mainly concerning decision making processes It also deals with applications to different areas of the social sciences It will be of interest to scholars and research students interested in the mathematical modelling of cognition and decision making and also interdisciplinary researchers interested in broader issues of cognition

Modelling Cognition Peter E. Morris, 1987-09-28 Presents major discussions of current issues in modelling human cognition along with examples of such models This book provides an overview of problems and advances in an area that has become increasingly important in recent years and which is attracting further interest as cognitive science becomes an established approach linking psychology philosophy artificial intelligence and linguistics Special attention is given to models that cope with novelty and the evidence of the value of computational models The essays were originally presented at the International Workshop on Modelling Cognition 1985 Contributors include many of the foremost international experts in the field

Computational Modeling in Cognition Stephan Lewandowsky, Simon Farrell, 2010-11-29 An accessible introduction to the principles of computational and mathematical modeling in psychology and cognitive science This practical and readable work provides students and researchers who are new to cognitive modeling with the background and core knowledge they need to interpret published reports and develop and apply models of their own The book is structured to help readers understand the logic of individual component techniques and their relationships to each other

Connectionist Models of Memory and Language (PLE: Memory) Joseph P. Levy, Dimitrios Bairaktaris, John Bullinaria, Paul Cairns, 2014-05-09 Connectionist modelling and neural network applications had become a major sub field of cognitive science by the mid 1990s In this ground breaking book originally published in 1995 leading connectionists shed light on current approaches to memory and language modelling at the time The book is divided into four sections Memory Reading Computation and statistics Speech and audition Each section is introduced and set in context by the editors allowing a wide range of language and memory issues to be addressed in one volume This authoritative advanced level book will still be of interest for all engaged in connectionist research and the related areas of cognitive science concerned with language and memory

Models and Cognition Jonathan A. Waskan, 2012-01-13 A groundbreaking argument challenging the traditional linguistic representational model of cognition proposes that representational states should be conceptualized as the cognitive equivalent of scale models In this groundbreaking book Jonathan Waskan challenges cognitive science's dominant model of mental representation and proposes a novel well devised alternative The traditional view in the cognitive sciences uses a linguistic propositional model of mental representation This logic based model of cognition informs and constrains both the classical tradition of artificial intelligence and modeling in the connectionist tradition It falls short however when confronted by the frame problem the lack of a principled way to determine which features of a representation must be updated when new information becomes available Proposed alternatives including the imagistic model have not so far resolved this problem Waskan proposes instead the Intrinsic Cognitive Models ICM hypothesis which argues that representational states can be conceptualized as the cognitive equivalent of scale models Waskan argues further that the proposal that humans harbor and manipulate these cognitive counterparts to scale models offers the only viable explanation for what most clearly differentiates humans from other creatures their capacity to engage in truth preserving manipulation of representations

Mariners' Adaptive Performance under Stress Athanassiou, Georgios, 2016-10-12 *Mariners' Adaptive Performance under Stress* focuses on the research question of direct and indirect effects of varying conditions of task integral cognitive and affective demands on adaptive performance of novice bridge operators The work draws theoretically on contextual models of cognition as well as appraisal theoretical frameworks of affect elicitation and experience The respective research hypotheses reflect expected individual and team related adaptive

responses at and after the onset of ambiguous trigger events with a prominent affective component when performing a complex ship management task Adaptive performance was measured by means of behavioural parameters with a relevance to normal and critical operations Visual behaviour of officers of the watch Threat and Error Management and Non Technical Skill performance of bridge crews and risk related crew decision making Additional surveys were employed for the assessment of the task related affective states and trigger event appraisals The results suggest that the observed adaptive performance especially on the team level is strongly affected by the co occurrence of constraining context conditions and the conspicuousness of the affective component of emerging events Consequently the work argues for an integrated approach towards combining cognition and affect for modelling human behaviour in dynamic environments It showcases the need for further research of cognition affect and their combined effects in the naturalistic context of work in order to comprehend the behaviour of the human element in practice beyond the obscuring veil of hindsight and outcome based evaluations

Computational Modeling of Cognition and Behavior Simon Farrell,Stephan Lewandowsky,2018-02-22 This book presents an integrated framework for developing and testing computational models in psychology and related disciplines Researchers and students are given the knowledge and tools to interpret models published in their area as well as to develop fit and test their own models

Integrated Models of Cognitive Systems Wayne D. Gray,2007-04-19 The field of cognitive modeling has progressed beyond modeling cognition in the context of simple laboratory tasks and begun to attack the problem of modeling it in more complex realistic environments such as those studied by researchers in the field of human factors The problems that the cognitive modeling community is tackling focus on modeling certain problems of communication and control that arise when integrating with the external environment factors such as implicit and explicit knowledge emotion cognition and the cognitive system These problems must be solved in order to produce integrated cognitive models of moderately complex tasks Architectures of cognition in these tasks focus on the control of a central system which includes control of the central processor itself initiation of functional processes such as visual search and memory retrieval and harvesting the results of these functional processes Because the control of the central system is conceptually different from the internal control required by individual functional processes a complete architecture of cognition must incorporate two types of theories of control Type 1 theories of the structure functionality and operation of the controller and type 2 theories of the internal control of functional processes including how and what they communicate to the controller This book presents the current state of the art for both types of theories as well as contrasts among current approaches to human performance models It will be an important resource for professional and student researchers in cognitive science cognitive engineering and human
