Gerson,1996 [Modeling the Driving Forces of Land Use and Land Cover Changes Along the Upper Yangtze River in China](#) Qing Xiang,2009 [Managerial Opportunity Recognition in Business Model Innovation](#) Marijan Topic,2017-11-06 Master s Thesis from the year 2017 in the subject Business economics Business Management Corporate Governance Friedrich Alexander University Erlangen Nuremberg language English abstract The goal of this Master s thesis is to examine the relationship between managerial OR and business model innovations BMIs in established organizations In order to meet the complexity of the topic this thesis is focused on factors that hinder or help managers in recognizing business opportunities Focusing on incumbent firms this paper conducts further research to identify the main influencing factors including challenges vulnerabilities and obstacles The thesis is divided into six parts starting with a brief description of the research topic including the problem position and objective Second a literature review is conducted to summarize the state of research including theoretical foundations In today s scientific literature the two fields of research BMI OR are by no means treated independently from each other For the time being BMI and OR are considered independently of each other It is then shown exactly how current literature treats managerial OR with respect to BMI The results are then synthesized into a summary highlighting what is known and not known The areas of controversy in the literature are identified and questions

are formulated that need further research The third part of the thesis consists of expert interviews Derived from the literature review a guideline for interviews is developed to treat the research gaps in an appropriate way and to meet the complexity of the task setting The explorative survey aims to identify the challenges and drivers of managerial OR in BMI and to identify approaches that have not yet been addressed in scientific literature to a significant extent The core of the analysis is the splitting of the BM into the elements value proposition value creation and value capture This ensures that all the facets of a company s BM are accurately addressed and form the basis for high quality results In order to cover a broad range the paper does not focus on a certain industry The interviews are conducted with an array of decision makers in organizations that have attempted or are currently attempting to innovate their BM at the business unit level or the corporate level

Rural Household Response to Shocks in Ethiopia. A Household Modelling Approach Asmayit Tekeste,2018-09-25  
Examination Thesis from the year 2016 in the subject Economics Other grade 4 0 EXCELLENT course DEVELOPMENT ECONOMICS language English abstract This study assesses the response of rural households to output and input prices as well as technological changes in mixed crop production in Ethiopia in case of Ada a woreda selecting a sample size of 100 households using a non separable household modeling approach Cobb Douglas function is used for the production and utility function and major constraints like land labor seed and fertilizer are considered in order to find the optimum values that would enable household maximize their utility The most widely produced 7 crops in the village were selected The optimal value exposes that mono cropping is better than multiple cropping to maximize utility Output price factor price and technology shocks were introduced in order to see how the households respond and how and to what extent that the production consumption and welfare of households are changed The finding of the study reveals that households tend to leave the agricultural sector if all input prices are increased by 10% and this is the case where the households face minimum welfare level When output prices are increased by the same figure farmers allocate all of their labor in the agricultural sector A technological improvement by 20% on teff enables households to fully engage in agricultural activities and secure the highest utility compared to other shocks while other crops are not responsive to technological change This implies that stakeholders should focus to improve the method of production of teff in the village In addition the government should get involved in such a way that factor prices shouldnt be increased beyond a certain point Ethiopia has experienced three main political regime changes in the last five decades along with an unremitting political instability and war In the imperial regime a mixture of feudalism and capitalism was the main framework of the economy The government also attempted to implement successive five year planning that heavily engaged in industrialization However they failed to achieve what is expected due to the fact that agriculture received less attention Amidst this performance the socialist government seized power and nationalized all the emerging private industries The government firmly controlled all economic activities and marginalized private investors from main activities
