## **Models Of Discovery:**

**Models of Discovery** Herbert A. Simon, 2012-12-06 We respect Herbert A Simon as an established leader of empirical and logical analysis in the human sciences while we happily think of him as also the loner of course he works with many colleagues but none can match him He has been writing fruitfully and steadily for four decades in many fields among them psychology logic decision theory economics computer science management production engineering information and control theory operations research confirmation theory and we must have omitted several With all of them he is at once the technical scientist and the philosophical critic and analyst When writing of decisions and actions he is at the interface of philosophy of science decision theory philosophy of the specific social sciences and inventory theory itself for him at the interface of economic theory production engineering and information theory When writing on causality he is at the interface of methodology metaphysics logic and philosophy of physics systems theory and so on Not that the interdisciplinary is his orthodoxy we are delighted that he has chosen to include in this book both his early and little appreciated treatment of straightforward philosophy of physics the axioms of Newtonian mechanics and also his fine papers on pure confirmation theory

Models of Discovery Herbert Alexander Simon, 1977 In these essays the author attacks the central problems in the philosophy of science from the viewpoint of a working scientist who relates the philosophical questions to methodological issues that have arisen in his own research The essays deal with six main topics the validation of hypotheses the logic of causal ordering and its relation to the definability and identifiability of theoretical terms the logic of imperatives and decisions the structure of complex systems the theory of scientific discovery and the axiomization of scientific theories He treats these topics in a unified way by employing the analytic tools of model theory and by putting the discovery of theories rather than their testing at the center of the stage Questions surrounding the axiomization of theories are examined in the light of real examples Newtonian mechanics and Ohm's law rather than simplified hypothetical ones Formalisms are not avoided but they are always used as a means and not as ends in themselves

**The Official Directory of the World's Columbian Exposition, May 1st to October 30th, 1893** Moses Purnell Handy,1893 *Models of Discovery and Creativity* Joke Meheus,Thomas Nickles,2009-10-08 Since the origin of the modern sciences our views on discovery and creativity had a remarkable history Originally discovery was seen as an integral part of methodology and the logic of discovery as algorithmic or nearly algorithmic During the nineteenth century conceptions in line with romanticism led to the famous opposition between the context of discovery and the context of justification culminating in a view that banned discovery from methodology The revival of the methodological investigation of discovery which started some thirty years ago derived its major impetus from historical and sociological studies of the sciences and from developments within cognitive psychology and artificial intelligence Today a large majority of philosophers of science agrees that the classical conception as well as the romantic conception are mistaken Against the classical conception it is generally accepted that truly novel discoveries are not the result of simply applying some standardized procedure Against the romantic conception it is rejected that discoveries are produced by unstructured flashes of insight An especially important result of the contemporary study concerns the availability of descriptive and normative models for explaining discoveries and creative processes Descriptive models mainly aim at explaining the origin of novel products normative models moreover address the question how rational researchers should proceed when confronted with problems for which a standard procedure is missing The present book provides an overview of these models and of the important changes they induced within methodology As appears from several papers the methodological study of discovery and creativity led to profound changes in our conceptions of justification and acceptance of

rationality of scientific change and of conceptual change The book contains contributions from both historians and philosophers of science All of them however are methodological in the contemporary sense of the term The central values of this methodology are empirical accurateness clarity and precision and rationality The different contributions realize these values by their interdisciplinary nature Some philosophically oriented papers rely on historical case studies and results from the cognitive sciences others on recent results from the computer sciences and or non standard logics The historically oriented papers address central philosophical questions and hypotheses
