Modeling With Nlp:

Modeling with NLP Robert Brian Dilts,2017-10-15 Modeling is the process of taking a complex event or phenomenon and breaking it into small enough chunks so that it can be recapitulated or applied in some way Behavioral modeling involves observing and mapping the successful processes which underlie an exceptional performance of some type The purpose of behavior modeling is to create a pragmatic map or model of a particular behavior which can be used to reproduce or simulate some aspect of that performance by anyone who is motivated to do so The ability to model effectively opens the door to many possibilities that have previously been unavailable to humankind In addition to providing a methodology which can be used to make ideas more explicit and easier to communicate modeling can transform the way we view and perceive one another If we see someone who does something better than ourselves for example instead of looking at that person and feeling inadequate jealous or suspicious we can go out and model how they do what they do The field of Neuro Linguistic Programming NLP has developed out of the modeling of the behaviors and thinking processes of exceptional people from many fields In fact the worldwide success of NLP as a technology for creating and managing change comes from its foundation in the modeling process This book is about the NLP modeling process and its applications The first part of this book is devoted to defining the principles and tools necessary for effective modeling the epistemology methodology and technology of NLP The second part of the book illustrates the application of NLP modeling procedures to the study of effective leadership It provides examples of how NLP was applied to identify specific cognitive linguistic and behavioral skills used by leaders to address challenging situations involving problem solving delegation and training on the job The results define the key communication and relational skills employed by effective leaders to achieve practical results in their working reality in order to create a world to which people want to belong **Modeling with NLP** Robert Dilts,1998 **The Neurophysics of Human Behavior** Mark E.
