Modelling Trig Functions

Model periodic motion and phenomena that can be modelled using periodic trigonometric functions. For example, use unit circle trigonometric ratios to find height and surface area.

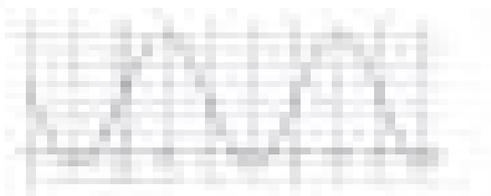

Example 1

(a) Write the trigonometric function whose maximum value is 4.5 and minimum is 0.

(b) Write the trigonometric function whose period is $\frac{1}{2}$ and the equation of the axis is $y = 2$.

Example 2

Write $y = \sin x$ as a standard cosine function.

Working Now

- (1) To determine the amplitude the cosine you need to consider the period $\frac{1}{2}$ and the phase shift.
- (2) To determine the maximum the cosine you need to consider the amplitude relative with all the terms.
- (3) Given you have your period plus a maximum point you can find the period. Therefore with some other point you can determine the horizontal asymptote and the period.
- (4) The maximum and minimum values will give horizontal asymptotes that are half way apart and half period.
- (5) $\frac{1}{2}$ times the period minus the phase shift is half the maximum and minimum value.
