Modelling Scale In Geographical Information Science:

Modelling Scale in Geographical Information Science Nicholas Tate, Peter M. Atkinson, 2001-12-05 Scale has long been a fundamental concept in geography. Its importance is emphasised in geographical information science (GIScience) where the computational domain necessitates the rigorous definition and handling of scale. Geographical information systems are now used in almost every walk of life but scale is often handled poorly in such systems. *Modelling Scale in Geographical Information Science* is written by an international team of contributors drawn from both industry and academia and considers models and methods of scaling spatial data in both human and physical systems. Divided into three sections to give a balanced coverage of the key problems, tools and models associated with scale: Fractal Models, The Modifiable Areal Unit Problem, Changing the Scale of Measurement. This book is an essential read for all GIScience researchers, advanced students and practitioners who want to delve more deeply into the scale issues of the spatial data and spatial models that form the basis of their analyses. *Cartography and Geographic Information Science*, 2008. *Statistical Analysis of Geographic Information with ArcView GIS and ArcGIS* David W. S. Wong, Jay Lee, 2005-10-20 CD-ROM contains complete set of ArcView Extensions used in text and accompanying datasets.

Geographic Information Systems and Environmental Modeling Keith C. Clarke, Bradley O. Parks, Michael P. Crane, 2002 This book provides readers with the most comprehensive and authoritative treatment of the topic available. Topics covered include modeling frameworks, paradigms and approaches, model development, calibration and validation, dynamic systems modeling and four-dimensional GIS and more. Includes case studies in GIS/EM. This book is intended for readers interested in advanced Geographic Information Systems, Spatial Data Processing or Environmental Modeling. **GIS, Spatial Analysis, and Modeling** David J. Maguire, 2005 A guide for geographic analysts, modelers, software engineers and GIS professionals, this book discusses agent-based modeling, dynamic feedback and simulation modeling as well as links between models and GIS software. This collection also presents a state-of-the-art understanding of applications based on environmental, atmospheric, hydrological, urban, social, health and economic models.

Uncertainty in Remote Sensing and GIS Giles M. Foody, Peter M. Atkinson, 2002 Remote sensing and geographical information science (GIS) have advanced considerably in recent years. However, the potential of remote sensing and GIS within the environmental sciences is limited by uncertainty, especially in connection with the data sets and methods used. In many studies, the issue of uncertainty has been incompletely addressed. The situation has arisen in part from a lack of appreciation of uncertainty and the problems it can cause, as well as of the techniques that may be used to accommodate it. This book provides general overviews on uncertainty in remote sensing and GIS that illustrate the range of uncertainties that may occur, in addition to describing the means of measuring uncertainty and the impacts of uncertainty on analyses and interpretations made. *Uncertainty in Remote Sensing and GIS* provides readers with comprehensive coverage of this largely undocumented subject. Relevant to a broad variety of disciplines including geography, environmental science, electrical

engineering and statistics Covers range of material from base overviews to specific applications Focuses on issues connected with uncertainty at various points along typical data analysis chains used in remote sensing and GIS Written by an international team of researchers drawn from a variety of disciplines Uncertainty in Remote Sensing and GIS provides focussed discussions on topics of considerable importance to a broad research and user community The book is invaluable reading for researchers advanced students and practitioners who want to understand the nature of uncertainty in remote sensing and GIS its limitations and methods of accommodating it
