Models Of Selforganization In Complex Systems Moses:

The Dynamics of Japanese Organizations Franz-Jurgen Richter,2013-09-13 This book assesses the organizational flexibility and pragmatism of Japanese management styles and contrasts this with Western management approaches which focus more closely on patterns of stability Issues in change and organizational renewal are covered by analysing the dynamic processes by which a Japanese company organizes itself exploring such areas as networks informatics quality control circles and human systems management

Models of Selforganization in Complex Systems Werner Ebeling,Manfred Peschel,Wolfgang Weidlich,1991

Physics of Self-Organization and Evolution Werner Ebeling,Rainer Feistel,2011-09-19 This thoroughly updated version of the German authoritative work on self organization has been completely rewritten by internationally renowned experts and experienced book authors to also include a review of more recent literature It retains the original enthusiasm and fascination surrounding thermodynamic systems far from equilibrium synergetics and the origin of life representing an easily readable book and tutorial on this exciting field The book is unique in covering in detail the experimental and theoretical fundamentals of self organizing systems as well as such selected features as random processes structural networks and multistable systems while focusing on the physical and theoretical modeling of natural selection and evolution processes The authors take examples from physics chemistry biology and social systems and include results hitherto unpublished in English The result is a one stop resource relevant for students and scientists in physics or related interdisciplinary fields including mathematical physics biophysics information science and nanotechnology

Brownian Agents and Active Particles Frank Schweitzer,2007-08-31 This book lays out a vision for a coherent framework for understanding complex systems By developing the genuine idea of Brownian agents the author combines concepts from informatics such as multiagent systems with approaches of statistical many particle physics It demonstrates that Brownian agent models can be successfully applied in many different contexts ranging from physicochemical pattern formation to swarming in biological systems

Mathematical Reviews ,2003

Maslov Classes, Metaplectic Representation and Lagrangian Quantization Maurice de Gosson,1997 The Maslov Classes have been playing an essential role in various parts of applied and pure mathematics and physics since the early 70 s Their correct definition is due to V I Arnold and J Leray in the transversal case and to P Dazord and the author in the general case The aim of this book is to give a thorough treatment of the theory of the Maslov classes and of their relationship with the metaplectic group It is among other things shown that these classes can be reconstructed modulo 4 using only the analytic properties of the metaplectic group In the last chapter the author sketches a scheme for geometric quantization by introducing two new concepts that of metaplectic half form and that of Lagrangian catalogue the latter generalizes and simplifies the notion of Lagrangian function introduced by J Leray A Lagrangian catalogue is a collection of metaplectic half forms which are themselves cohomological wave functions whose definition is made possible by using the combinatorial properties of the Maslov classes The transformation of Lagrangian

catalogues under the metaplectic group and of Hamiltonian flows is studied and it is shown that one thus recovers very easily the so called quasi classical approximation to the solutions of Schrödinger equation if one introduces a natural concept that of projection of a Lagrangian catalogue An application to geometric phase shifts including Berry's phase is given

Partial Differential Equations Günter Lumer, Serge Nicaise, Bert-Wolfgang Schulze, 1994 This volume contains the contributions of the conference Partial Differential Equations in Han-sur-Lesse Belgium December 1993 The originally intended Belgian French meeting developed into a truly international conference including specialists from Argentina Germany Puerto Rico Russia Spain and the USA The authors was to discuss a variety of important questions in applied sciences engineering and mathematical physics which lead to deep structures and new challenges to the analysis of partial differential equations The articles show the complexity of phenomena for a broader readership in non linear analysis free boundary value problems effects from singularities asymptotics and stability of solutions

Covergence Theorems with a Stable Limit Law Gerd Christoph, Werner Wolf, 1992-12-15 The book deals with Berry-Esseen type inequalities asymptotic expansions non uniform estimates U statistics and the density problem

Theoretical Foundations of Computer Vision Reinhard Klette, Walter Kropatsch, 1992

The Stokes Equations Werner Varnhorn, 1994 The present book consists of three parts In the first part a theory of solvability for the stationary Stokes equations in exterior domains is developed We prove existence of strong solutions in Sobolev spaces and use a localisation principle and the divergence equation to deduce further properties of the solution uniqueness asymptotics

1st European Nonlinear Oscillations Conference Edwin Kreuzer, Günter Schmidt, 1993-09 The Proceedings of the 1st European Nonlinear Oscillations Conference contain invited contributions of mathematicians engaged in the development of analytical and numerical methods and of scientists working on vibration problems in mechanics physics and other fields
