Representational Systems and Practices as Learning Tools Christopher Andersen, Nora Scheurer, María del Puy Leonor Pérez Echeverría, Eva Teubal, 2009 Learning and teaching complex cultural knowledge calls for meaningful participation in different kinds of symbolic practices which in turn are supported by a wide range of external representations as gestures oral language graphic representations writing and many other systems designed to account for properties and relations on some 2 or 3 dimensional objects Children start their apprenticeship of these symbolic practices very early in life But being able to understand and use them in fluid and flexible ways poses serious challenges for learners and teachers across educational levels from kindergarten to university This book is intended as a step in the path towards a better understanding of the dynamic relations between different symbolic practices and the acquisition of knowledge in various learning domains settings and levels Researchers from almost twenty institutions in three different continents present first hand research in this emerging area of study and reflect on the particular ways and processes whereby participation in symbolic practices based on a diversity of external representations promotes learning in specific fields of knowledge The book will be useful for persons interested in education as well as cognitive psychologists linguists and those concerned by the generation appropriation transmission and communication of knowledge *Annual Meeting Program American Educational Research Association, 1998*

Symbols and Embodiment Manuel de Vega, Arthur M. Glenberg, Arthur C. Graesser, 2008 Cognitive scientists have a variety of approaches to studying cognition experimental psychology computer science robotics neuroscience educational psychology philosophy of mind and psycholinguistics to name but a few In addition they also differ in their approaches to cognition some of them consider that the mind works basically like a computer involving programs composed of abstract amodal and arbitrary symbols Others claim that cognition is embodied that is symbols must be grounded on perceptual motoric and emotional experience The existence of such different approaches has consequences when dealing with practical issues such as understanding brain disorders designing artificial intelligence programs and robots improving psychotherapy or designing instructional programs The symbolist and embodiment camps seldom engage in any kind of debate to clarify their differences This book is the first attempt to do so It brings together a team of outstanding scientists adopting symbolist and embodied viewpoints in an attempt to understand how the mind works and the nature of linguistic meaning As well as being interdisciplinary all authors have made an attempt to find solutions to substantial issues beyond specific vocabularies and techniques

Models and Cognition Jonathan A. Waskan, 2006 In this groundbreaking book Jonathan Waskan challenges cognitive science's dominant model of mental representation and proposes a novel well devised alternative The traditional view in the cognitive sciences uses a linguistic propositional model of mental representation This logic based model of cognition informs and constrains both the classical tradition of artificial

intelligence and modeling in the connectionist tradition It falls short however when confronted by the frame problem the lack of a principled way to determine which features of a representation must be updated when new information becomes available Proposed alternatives including the imagistic model have not so far resolved this problem Waskan proposes instead the Intrinsic Cognitive Models ICM hypothesis which argues that representational states can be conceptualized as the cognitive equivalent of scale models Waskan argues further that the proposal that humans harbor and manipulate these cognitive counterparts to scale models offers the only viable explanation for what most clearly differentiates humans from other creatures their capacity to engage in truth preserving manipulation of representations The ICM hypothesis he claims can be distinguished from sentence based accounts of truth preservation in a way that is fully compatible with what is known about the brain Waskan also develops a new account of explanation grounded in the ICM hypothesis as an alternative to the traditional deductive nomological model which he claims suffers the same shortcomings as other sentence based accounts of representation and inference Waskan s Model model of explanation resolves these problems in a way that no other account of explanation can
