Scientists Guide To Poster Presentations:

Scientist's Guide to Poster Presentations Peter J. Gosling, 2012-12-06 Scientific information is increasingly being communicated at both national and international scientific conferences in the form of poster presentations. A recent international conference for example which involved nearly 500 delegates from over 50 different countries included information presented in 331 posters. Recent experience has shown however that the presentational standard of such posters even at the international level varies immensely. Individuals presenting well designed eye catching and engaging posters are at a distinct advantage in promoting their scientific information. In doing so they also promote themselves as credible scientists as well as promoting the reputation of their establishments and countries of origin. However producing a poster of high quality requires considerable planning and the acquisition of specific presentational skills. This book provides detailed practical guidance on all aspects of presenting scientific information in the form of posters. It is assumed that the presenter has access either at home at work or through libraries to a computer or word processor a color printer and photocopiers. The book is intended to help scientists to gain poster presentational skills in a manner that enables adoption of an individualistic style of presenting information in a credible fashion. The book has relevance internationally and is primarily targeted at research workers including postgraduate students and all scientific professionals who are required to present visual communication of scientific information.

Academic & Scientific Poster Presentation Nicholas Rowe, 2017-09-04 This book offers the first comprehensive guide to poster presentation at academic scientific and professional conferences. Each chapter explores different factors that impact upon how posters function and how they fit within today's conference practices as well as provides guidance on how to address compilation and presentation issues with the poster medium. Drawing from fields of education psychology advertising and other areas the book offers examples of how

theories may be applied to practice in terms of both traditional paper and electronic poster formats. Importantly, the book offers a critical examination of how academic and scientific posters are able to achieve their potential for knowledge dissemination, networking, and knowledge transfer. The many new and challenging findings provide an evidence-based approach to help both novice and experienced presenters compile effective poster presentations and to see how poster presentations can best be used to share knowledge, facilitate networking, and promote dialogue. Additionally, educators, employers, and conference organizers may use this book to re-evaluate how conferences meet the needs of today's globally connected peer groups and the benefit they provide at individual and group levels.
