Lean Business Systems and Beyond Tomasz Koch,2008-01-28 Lean Manufacturing has proved to be one of the most successful and most powerful production business systems over the last decades Its application enabled many companies to make a big leap towards better utilization of resources and thus provide better service to the customers through faster response higher quality and lowered costs Lean is often described as eyes for flow and eyes for muda philosophy It simply means that value is created only when all the resources flow through the system If the flow is stopped no value but only costs and time are added which is muda Jap waste Since the philosophy was born at the Toyota many solutions were tailored for the high volume environment But in turbulent fast changing market environment and progressing globalization customers tend to require more customization lower volumes and higher variety at much less cost and of better quality This calls for adaptation of existing lean techniques and exploration of the new waste free solutions that go far beyond manufacturing This book brings together the opinions of a number of leading academics and researchers from around the world responding to those emerging needs They tried to find answer to the question how to move forward from Spaghetti World of supply production distribution sales administration product development logistics accounting etc Through individual chapters in this book authors present their views approaches concepts and developed tools The reader will learn the key issues currently being addressed in production management research and practice throughout the world

Beyond Manufacturing Resource Planning (MRP II) Andreas Drexl,Alf Kimms,2013-11-11 The logic of Manufacturing Resource Planning MRP II is im plemented in most commercial production planning software tools and is commonly accepted by practitioners However these peo ple are not satisfied with production planning and complain about

long lead times high work in process and backlogging As many researchers have pointed out the reason for these shortcomings is inherent to the methods that are used The research community is thus eager to find more sophisticated approaches This book is an attempt to compile some state of the art work in the field of production planning research It includes material that somehow dominates the existing MRP II concept 15 articles written by 36 authors from 10 countries cover many aspects related to MRP II All papers went through a single blind refereeing process before they were selected for being published in this book When we received papers for this issue we discovered that MRP II is a topic about which not only management scientists show interest As the list of authors proves industrial engineers computer scientists and operations researchers from academia as well as practitioners have contributed to this book This we hope makes the book of value for a broad audience We thank all authors who submitted papers And we are indebted to Dr Werner Muller from Springer for his support in this book project
