Tauc, 1968 *The Electronic Structure and Optical Properties of GaAs Two-dimensional Electron Systems* David Robert Richards, 1990 *Electronic Structure and Optical Properties of Heterogeneous Nanocrystals* Sergio Ivan Carrillo Guerrero, 2012 The main objective of this work is to give a description of the electronic structure and optical properties of semiconductor quantum dots nanocrystals containing heterojunctions i e nano junctions between two semiconductors These nanostructures have interesting optical properties which are very promising for applications in photonics and photovoltaics The theoretical description of the effects of the interface demands special attention We start describing the calculations of the electronic structure of bulk semiconductors using semi empirical tight binding and we show how to apply this technique to semiconductor quantum dots We develop expressions to connect the discrete levels of energy in a quantum dot and the transitions in optical absorption spectra The bulk tight binding parameters are used for the calculation of the electronic structure of quantum dots of single compounds analyzing the effect of the size variation of the quantum dots The effectiveness of this method is demonstrated in particular we obtain good values for the bandgap versus size compared to experiments We apply this method to calculate the electronic structure of PbSe CdSe core shell quantum dots after an analysis of the different types of interfaces that can appear in this system and we discuss the issues related to the

determination of the band offsets The results of these calculations validate the assumption of the role of the shell as a potential barrier for the electron and the hole The electronic structures are used in the last chapter to simulate the absorption spectra of PbSe CdSe and PbSe CdSe quantum dots We give theoretical support to recent experiments in transient absorption spectroscopy revealing groups of new transitions originated by photo induced intraband absorption Our calculations shed light on the nature of these optical transitions which can be of interest for applications in photonics
