Stephens, 1987-02-23 Presents a multifaceted view of the monsoon its lore its societal impact and its meteorology Includes an economic analysis of the value of weather and climate data in developing countries thorough treatment of monsoon variability on paleoclimate time scales topographical influences on monsoons and ocean monsoon interactions the latest information on the tools being used to predict the variability of monsoons and much more Focuses on the Asian monsoon and in particular the Indian summer monsoon Provides illustrations with ocean circulation charts data tables on long term statistics of monsoon precipitation and precipitation variability

The Monsoons and Climate Change Leila Maria Véspoli de Carvalho, Charles Jones, 2015-12-22 This book presents a global overview examining monsoon variability in South Asia Australian South America and North American as well as a focus on glaciers and monsoon systems Monsoon systems are important components of the Earth s climate and play fundamental roles in water and energy balances The variability and changes in the monsoons affect millions of people and the economies of many countries This book presents the physical mechanisms involved with monsoon systems including recent modeling advances addressing climate changes and future projections The Monsoons and Climate Change will be of interest to both graduate students and researchers **Regional Climate Studies of China** Congbin Fu, Zhihong

Jiang, Zhaoyong Guan, Jinghai He, Zhong-feng Xu, 2008-09-26 Regional Climate of China is the first volume to present the latest research findings gained over the last decade which has greatly advanced our knowledge of the regional climate researches in China A distinctive feature of the volume is that it is based on an integration of researches by using the advanced technologies such as field observation and experiment satellite information and numerical models in the regional climate studies *Report on the Meteorology of India* , 1890 *Monsoon Meteorology* Colin S. Meteorological Department, 1889 *Dynamics and Predictability of Large-Scale, High-Impact Weather and Climate Events* Jianping Li, Richard Swinbank, Richard Grotjahn, Hans Volkert, 2016-03-24 Based largely on an International Commission on Dynamical Meteorology ICDM workshop this timely volume written by leading researchers in the field covers a range of important research issues related to high impact weather and extreme climate events Dynamical linkages between these extremes and various atmospheric and ocean phenomena are examined including Atlantic Multidecadal North Atlantic and Madden Julian Oscillations Annular Modes tropical cyclones and Asian monsoons

This book also examines the predictability of high impact weather and extreme climate events on multiple time scales Highlighting recent research and new advances in the field this book enhances understanding of dynamical and physical processes associated with these events to help managers and policy makers make informed decisions to manage risk and prevent or mitigate disasters It also provides guidance on future research directions in atmospheric science meteorology climate science and weather forecasting for experts and young scientists Assessment of Climate Change over the Indian Region R. Krishnan,J. Sanjay,Chellappan Gnanaseelan,Milind Mujumdar,Ashwini Kulkarni,Supriyo Chakraborty,2020-06-12 This open access book discusses the impact of human induced global climate change on the regional climate and monsoons of the Indian subcontinent adjoining Indian Ocean and the Himalayas It documents the regional climate change projections based on the climate models used in the IPCC Fifth Assessment Report AR5 and climate change modeling studies using the IITM Earth System Model ESM and CORDEX South Asia datasets The IPCC assessment reports published every 6 7 years constitute important reference materials for major policy decisions on climate change adaptation and mitigation While the IPCC assessment reports largely provide a global perspective on climate change the focus on regional climate change aspects is considerably limited The effects of climate change over the Indian subcontinent involve complex physical processes on different space and time scales especially given that the mean climate of this region is generally shaped by the Indian monsoon and the unique high elevation geographical features such as the Himalayas the Western Ghats the Tibetan Plateau and the adjoining Indian Ocean Arabian Sea and Bay of Bengal This book also presents policy relevant information based on robust scientific analysis and assessments of the observed and projected future climate change over the Indian region
