contains the proceedings of the 21st IFAC IFIP Workshop on Real Time Programming WRTP 96 held in Gramado Brazil on 4 6 November 1996 Over the years this series of annual workshops has become an excellent forum for exchanging information on technological advances and practices in real time computing a field that is rapidly becoming an essential enabling discipline in computer science and engineering The technical programme of the workshop maintained the outstanding quality of the series and covered all the latest research and developments in scheduling operating systems communications timing analysis system development databases formal methods and applications In addition to high quality papers the programme featured three world class keynote speakers and some poster presentations These proceedings therefore comprise 21 full papers three keynote addresses and five short contributions **Computer Safety, Reliability and Security** Wolfgang Ehrenberger,1998-09-23 Computers and their interactions are becoming the characteristic features of our time Many people believe that the industrial age is going over into the information age In the same way as life of the beginning of this century was dominated by machines factories streets and railways the starting century will be characterised by computers and their networks This change naturally affects also the institutions and the installations our lives depend upon power plants including nuclear ones chemical plants mechanically working factories cars railways and medical equipment they all depend on computers and their connections In some cases it is not human life that may be endangered by computer failure but large investments e g if a whole plant interrupts its production for a long time In addition to loss of life and property one must not neglect public opinion which is very critical in many countries against major technical defects The related computer technology its hardware software and production process differ between standard applications and safety related ones In the safety case it is normally not only the manufacturers and the customers that are involved but a third party usually an assessor who is taking care of the public interest on behalf of a state authority Usually safety engineers are in a better position than their colleagues from the conventional side as they may spend more time and money on a particular task and use better equipment *Tutorial Hard Real-time Systems* John A.
