Population Regulation Mechanisms in Laboratory Systems: Genetic Feedback, Density-dependence and Environmental Randomness Paul Clough Johnson, 1974 *Insect Populations In theory and in practice* Royal Entomological Society of London. Symposium University of Newcastle, 1998 Insects are far and away the largest group of animals on earth with over a million described species and they occupy a wide range of ecological niches they may be herbivores predators parasites or decomposers Some are of particular economic importance as pests of agriculture and forestry as vectors of animal and human disease or as species of interest to wildlife conservation so an understanding of the processes determining their numbers is of considerable practical value Ecology: The Experimental Analysis of Distribution and Abundance Charles Krebs, Charles J. Krebs, 2013-07-23 This best selling majors level book by Charles Krebs approaches ecology as a series of problems which are best understood by evaluating empirical evidence through data analysis and application of quantitative reasoning No other book presents analytical quantitative and statistical ecological information in an equally accessible style for students Reflecting the way ecologists actually practice the new edition emphasizes the role of experiments in testing ecological ideas and discusses many contemporary and controversial problems related to distribution and abundance **KEY TOPICS** Introduction to the Science of Ecology Evolution and Ecology Behavioral Ecology Analyzing Geographic Distributions Factors That Limit Distributions I Biotic Factors That Limit Distributions II Abiotic Distribution and Abundance Population Parameters and Demographic Techniques Population Growth Species Interactions I Competition Species Interactions II Predation Species Interactions III Herbivory and Mutualism Species Interactions IV Disease and Parasitism Regulation of Population Size Applied Problems I Harvesting Populations Applied Problems II Pest Control Applied Problems III Conservation Biology Community Structure Community Dynamics I Biodiversity Community Dynamics II Predation and Competition Community Dynamics III Nonequilibrium Communities Ecosystem Metabolism I Primary Production Ecosystem Metabolism II Secondary Production Ecosystem Metabolism III Nutrient Cycles Ecosystem Dynamics under Changing Climates Ecosystem Health Human Impacts **MARKET** Intended for those interested in learning the basics of ecology *Handbook of Biological Control* T. W. Fisher, Thomas S. Bellows, L. E. Caltagirone, D. L. Dahlsten, Carl B. Huffaker, G. Gordh, 1999-09-20 For many years the use of chemical agents such as pesticides and herbicides has been effective in controlling the many varieties of pests that infest both agricultural crops and backyard gardens However these pests are gradually becoming resistant to these agents because the agents themselves are acting as selective factors making the pests better and better able to resist and persist As a result the use of biological controlling agents is increasing This book is a comprehensive and authoritative handbook of biological control The Ecological World View Charles J. Krebs, 2008-04-02 Filled with many examples of topic issues and current events this book develops a basic understanding of how the natural world works and of how humans interact with the planet's natural ecosystems It covers the history of ecology and describes

the general approaches of the scientific method then takes a look at basic principles of population dynamics and applies them to everyday practical problems

Cougar Maurice Hornocker, Sharon Negri, 2009-12-15 The cougar is one of the most beautiful enigmatic and majestic animals in the Americas Eliciting reverence for its grace and independent nature it also triggers fear when it comes into contact with people pets and livestock or competes for hunters game Mystery myth and misunderstanding surround this remarkable creature The cougar s range once extended from northern Canada to the tip of South America and from the Pacific to the Atlantic making it the most widespread animal in the western hemisphere But overhunting and loss of habitat vastly reduced cougar numbers by the early twentieth century across much of its historical range and today the cougar faces numerous threats as burgeoning human development encroaches on its remaining habitat When Maurice Hornocker began the first long term study of cougars in the Idaho wilderness in 1964 little was known about this large cat Its secretive nature and rarity in the landscape made it difficult to study But his groundbreaking research yielded major insights and was the prelude to further research on this controversial species The capstone to Hornocker s long career studying big cats Cougar is a powerful and practical resource for scientists conservationists and anyone with an interest in large carnivores He and conservationist Sharon Negri bring together the diverse perspectives of twenty two distinguished scientists to provide the fullest account of the cougar s ecology behavior and genetics its role as a top predator and its conservation needs This compilation of recent findings stunning photographs and firsthand accounts of field research unravels the mysteries of this magnificent animal and
