Luftwaffe Secret Projects:

Luftwaffe Secret Projects Dieter Herwig, Heinz Rode, 2003 8 x 11 150 b w photos 110 color illustrations The two previous volumes in this hugely popular series have covered Fighters 1939 1945 and Strategic Bombers 1935 1945 This new addition takes a close look at a varied range of aircraft types principally described as ground attack and special purpose types but which includes Kampferstvrer multi purpose combat aircraft multi purpose and fast bombers explosive carrying aircraft intended to attack other aircraft air to air ramming vehicles bomb carrying gliders and towed fighters and airborne weapons and special devices rockets cannons flame throwers etc As in the first two volumes the technical descriptions and histories of about 140 aircraft types are brought to life by many specially created full color artworks showing the projects often in unit markings as they might have appeared if they had come to fruition and or if the war had continued beyond 1945 This series has proven indispensable for historians and notably for modelers whose imaginations are fired up by these revelations

Secret Projects of the Luftwaffe - Vol 2 Dan Sharp, 2024-06-03 The story of Germany's WW2 bomber development programmes *Luftwaffe Secret Projects* Dieter Herwig, 2000 **Luftwaffe Secret Projects** Walter Schick, Ingolf Meyer, 1997 Designs from Germany's aerodynamics engineers detail proposed military aircraft including wing span and area aspect ratio length height weight speed and armament **LUFTWAFFE SECRET PROJECTS PROFILES VOL 2**, 2025

Luftwaffe Secret Projects Dieter Herwig, Heinz Rode, 2000 This eagerly awaited companion volume to the enormously popular volume on fighters looks at the might have been strategic German bombers Filled with transatlantic jets and projects that were on the drawing board or in prototype form at the war's end Full color action illustrations in contemporary markings and performance data tables show vividly what might have been achieved had the war continued beyond 1945 Luftwaffe Secret Projects of the Third Reich Dan Sharp, 2019-08 **Luftwaffe**, 2019-01-08 *Luftwaffe Secret Project Profiles* features more than 200 highly detailed full color profiles of jet propelled aircraft designs produced in Nazi Germany during the Second World War Renowned aviation artist Daniel Uhr has brought the original German construction sketches and three views to life like never before offering a whole new perspective on images previously only seen as black and white line drawings Accompanying Daniel's artworks is a full description of the competitions and requirements which produced such a huge number of innovative and unusual designs during the war as well as descriptions of the designs themselves written by historian Dan Sharp and based on the latest historical research Offering a host of different color schemes and detailed notes this is indispensable reading for enthusiasts and modelers alike **Luftwaffe Advanced Aircraft Projects to 1945** Ingolf Meyer, 2006 This is the second in a two volume work shedding light on a remarkable range of unearthed secret projects and experimental aircraft designs developed by German aircraft designers during the era of the Third Reich The book is the result of intense research by Ingolf Meyer who also researched the projects contained in the best selling *Luftwaffe Secret Projects* series This volume covers experimental fighters and ground attack aircraft projects developed from manufacturers

falling alphabetically between Lippisch and Zeppelin and is packed with detailed illustrations of never before seen experimental projects This work contains more illustrations and less text than the Luftwaffe Secret Projects series enhancing the book s appeal to modelers and others interested in the technical details of these projects **Jet Fighters 1939 -1945** DAN. SHARP,2020-01-19 Germany s WW2 jet fighter development programmes comprehensively detailed **Secret Projects of the Luftwaffe in Profile** Daniel Uhr,2021-10-11 The Second World War was a time of tremendous technological progress in aviation with innovations such as jet engines and swept wings being brought in as engineers on all sides desperately sought every possible performance advantage In Germany the quest for better aircraft resulted in some astonishing designs everything from bombers with forward swept wings to ramjet fighters and disposable rocket propelled interceptors In Secret Projects of the Luftwaffe in Profile renowned aviation artist Daniel Uhr has brought the original German construction sketches and three views of these designs to life like never before offering a whole new perspective on images previously only seen as black and white line drawings Accompanying Daniel s artworks is a full description of the competitions and requirements which produced such a huge number of innovative and unusual designs during the war as well as descriptions of the designs themselves written by German Second World War aircraft development specialist Dan Sharp and based on the latest historical research *British Special Projects* Bill Rose,2021-01-28 An insight into British ambitious and often unrealistic aspirations to stay at the forefront of advanced technology such as the development of the atomic powered warplane The world s first military flying wing was a British design that saw operational service during the First World War A manned rocket ship launched from a converted V bomber was proposed capable of reaching the edge of space Beautifully illustrated with many rare and unpublished photographs Of interest to aviation and military historians modellers gamers and flight simulator enthusiasts Flying wings deltas and tailless aircraft continue to generate enormous interest within the aviation community and many of the older designs still look surprisingly futuristic *British Special Projects Flying Wings Deltas and Tailless Designs* examines the lesser known and frequently secret British projects undertaken for research or military purposes during the last century and also covers those aircraft that were built and in some cases entered service The first commercially successful British flying wing biplane designed by John Dunne undertook limited military reconnaissance duties during the First World War Various flying wings followed but the German development of the delta would prove massively influential with post war British aerodynamicists immediately recognising the potential for a new generation of high performance designs Parallel research into advanced flying wings would produce plans for the superb looking Barnes Wallace supersonic swing wing bomber although his design was too far ahead of its time to progress any further There were also dead end projects for bombers powered by atomic propulsion vertical take off concepts and over ambitious ideas for British spacecraft that utilised delta and blended wing bodies but were too technically challenging and costly to develop further Nevertheless many of these designs that stemmed from the simple flying wing remain influential

today *SECRET PROJECTS OF THE LUFTWAFFE VOL7* DAN. SHARP,2023 **Secret Projects of the Luftwaffe - Vol 1 - Jet Fighters 1939 -1945** Dan Sharp,2020-09-22 Germany's air ministry was quick to grasp the potential of the jet engine as early as 1938 and by 1939 several German aircraft manufacturers were already working on fighter designs that would utilize this new form of propulsion Rocket engines too were seen as the way of the future and companies were commissioned to design fighters around them As the Second World War began the urgent need to bring these advanced new types into production saw a host of innovative aircraft designs being produced which would eventually result in Messerschmitt's Me 262 jet fighter and the Me 163 rocket propelled interceptor And as the war progressed efforts were increasingly made to find better ways of utilizing jet rocket and latterly ramjet engines in fighter aircraft Aviation companies from across Germany set their finest minds to the task and produced some of the most radical aircraft designs the world had ever seen They proposed rotating wing ramjet fighters arrowhead shaped rammers rocket firing bat winged gun platforms sleek speed machines tailless flying wings tiny mini fighters and a host of others ranging from deadly looking advanced fighters to downright dangerous vertical launch interceptors *Secret Projects of the Luftwaffe Volume 1 Jet Fighters 1939 1945* by Dan Sharp based on original research using German wartime documents offers the most complete and authoritative account yet of these fascinating designs through previously unseen photographs illustrations and period documentation from archives around the world **Nazi Moonbase** Graeme Davis,2016-04-21 In the dying days of World War II Nazi Germany spent increasingly large amounts of its dwindling manufacturing capability on the construction of a small fleet of flying saucers capable of travel beyond the atmosphere While these saucers were too few in number to affect the eventual outcome of the war they did allow for a small but fanatical Nazi group to escape Germany first to Antarctica and then on to the moon For the first time the history of the Nazi space program has been revealed with a focus on the design construction and layout of the moonbase Using detailed maps the entire moonbase is reconstructed noting the locations of various important features such as weapon emplacements the Vril generator the air recyclers and water extractors The book also covers the various attempt by the allies to overcome this last Nazi stronghold through both subterfuge and outright battle *Combat in the Stratosphere* Steven Taylor,2024-05-31 The first book devoted exclusively to exploring the development and use of aircraft designed specifically for high altitude operations in World War II In the summer of 1940 a new German aircraft began appearing in the skies over the British Isles Unlike the rest of the Luftwaffe's fleet in the Battle of Britain these aircraft were flying at a height of 40 000 feet and higher way beyond the reach of the RAF's defending fighters These virtually untouchable intruders were examples of the Junkers Ju 86P The world's first operational combat aeroplane equipped with a pressurized cabin they were able to reach a maximum altitude of 42 000 feet The Ju 86P's introduction ushered in a new era of aerial warfare where combat would take place at previously unimaginable heights The Ju 86P was just one of many high altitude aircraft projects developed by both the Axis and Allied powers during the Second World War Others included the Vickers Wellington Mk VI

Vickers Windsor Boeing B 29 Superfortress Junkers Ju 388 Heinkel He 274 and Henschel Hs 130 With pressurized cabins such aircraft offered obvious tactical advantages bombers and reconnaissance aircraft could operate safely above the maximum ceiling of the opposing side's fighters prompting intense development especially by the British and Germans of pressurized interceptors to meet the threat they posed

Combat in the Stratosphere is the first book devoted exclusively to exploring the fascinating story of the development and operational history of aircraft designed specifically for high altitude operations during the Second World War But this is not a book solely about the machines themselves It also focuses on the men who flew these revolutionary aircraft both in the testing phase and in combat and the physical challenges these courageous airmen faced as they pushed themselves to the very edge of physical endurance in this desperate race to reach ever higher altitudes Drawing on a wide range of sources including air combat reports British Cabinet files and Air Ministry documents as well as first hand accounts of aeronautical engineers and the pilots who flew these aircraft **Combat in the Stratosphere** reveals the full story of this largely overlooked aspect of Second World War air warfare high above the skies of Europe North Africa the Soviet Union and Japan *Flypast*, 2008 **International Warbirds** John C. Fredriksen, 2001-08-01 In depth descriptions and photographs of the aircraft of 21 nations presented with a unique human dimension that goes behind the machines to the people involved Invaluable for specialists accessible to enthusiasts

International Warbirds An Illustrated Guide to World Military Aircraft 1914 2000 puts the most legendary fighter aircraft of the 20th century developed outside the United States on vivid display It offers 336 illustrated biographies of the most significant warplanes used in squadron service from World War I to the Balkan conflict including numerous models from Great Britain France Russia and Japan as well as notable machines from Israel Canada China India Brazil and other nations Entries span the history and scope of military aircraft from bombers and fighters to transports trainers reconnaissance craft sea planes and helicopters with each capsule history combining nuts and bolts technical data with the story of that model's evolution and use Together these portraits offer an exciting well researched tribute to visionary designers and builders as well as courageous pilots and crews across the globe and tell a vivid tale of how air power became such a decisive factor in modern warfare *The Warlord and the Renegade* James Wyllie, 2007-02-01 There is a continuing interest in the history of Hitler's Third Reich This is a quirky untold story of Hitler's Third Reich that uncovers the Goring brothers bizarre relationship It is illustrated with many rare archive photographs *German Air-dropped Weapons to 1945* Wolfgang Fleischer, 2004 8 1 2 x 11 390 b w photos Aircraft armament is very much an under published subject area in which there is a growing interest This is particularly true of air dropped ammunition This subject involves more than just bombs rockets and a range of other weapons also come into this category Combine this subject area with the Luftwaffe in World War II and you will have a book which is of great interest to historians and modelers alike and will also be of some practical value for artificers and personnel dealing with weapons systems in today's air forces This book traces the development of German air

dropped ammunition from the crude aeronautical artillery of World War I to the advanced remote control bombs of World War II Major topics include demolition bombs incendiary bombs special dropped ammunition sea dropping ammunition and dropping containers A comprehensive illustrated listing catalogues information on 100 different bombs 22 canisters and 50 of the most important bomb fuses This is an unusual and innovative aviation title which will appeal to a wide readership in many areas of the aviation hobby
