Lung Development:

The Lung Kent Pinkerton, Richard Harding, Charles Plopper, 2003-11-21 This unique book provides a concise account written by world authorities in their fields of how the mammalian lung grows and matures before birth and how the lungs and their ability to function well can be affected by the environment and by genetic factors both before and after birth It provides an understanding of the basis of some major lung diseases affecting infants and children The book also deals with how the lung changes with age and how the process of lung aging can be affected by the environment Discusses the mechanisms that regulate the initial events of lung morphogenesis Provides a better understanding of the cellular and biochemical events involved in alveolarization Development of the pulmonary immune system and how the exposure to allergens during development may lead to diseases such as asthma *Fetal & Neonatal Lung Development* Alan H.

Jobe, Jeffrey A. Whitsett, Steven H. Abman, 2016-04-18 This book provides an authoritative review of fetal and neonatal lung development and is designed to provide diverse groups of scientists spanning the basic to clinical research spectrum with the latest developments on the cellular and molecular mechanisms of normal lung development and injury repair processes and how they are dysregulated in disease **Pathology of the Lung** William M. Thurlbeck, Andrew Churg, 1995 The last years have witnessed remarkable changes in the incidence types of lung disease seen by clinicians pathologists including the resurgence of tuberculosis the far reaching impact of AIDS At the same time major advances in understanding the genesis of pathologic processes especially using new techniques of molecular biology immunochemistry have led to important breakthroughs in diagnosis treatment High time for the new edition of this unparalleled work **Lung Development**

The Baboon in Biomedical Research John L. VandeBerg,Sarah Williams-Blangero,Suzette D. Tardif,2009-06-04 Nonhuman primates have played critical roles in biomedical research and they are among the few animals whose use in research continues to increase The scientific value of nonhuman primates derives from their close phylogenetic proximity to man and their consequent anatomic physiologic and genetic similarities to man Only nonhuman primates can provide adequate models for many complex physiological and disease processes of humans The baboon is a relative newcomer to the repertoire of nonhuman primates used in biomedical research However in less than 50 years since its first use in the U S it has become one of the most popular laboratory primate species It is larger than the other widely used monkey species making it advantageous for many types of experiments and technological developments It is extraordinarily hardy and highly fecund in captivity It closely resembles humans in a variety of physiological and disease processes such as cholesterol metabolism early stages of atherosclerosis and alcoholic liver disease Its chromosomes closely resemble those of humans and many genes of the two species lie in the same chromosomal order Among all primates baboons are the most widely used models for the genetics of susceptibility to complex diseases and they are the first nonhuman primate for which a framework genetic linkage map was established In addition the baboon genome is currently being sequenced and as a result the utility of this species for biomedical research will be dramatically increased *Fetal Medicine* Charles H. Rodeck,Martin J. Whittle,2009-01-01 Fetal medicine has emerged as a separate subspecialty over the last 30 years as a result of major advances in a number of areas in particular ultrasound imaging cytogenetics molecular biology and biochemistry The widespread use of antenatal screening and diagnostic tests has led to an increased need for obstetricians to have knowledge and skills in fetal medicine This book provides the information that underpins training programmes in fetal medicine and integrates science and clinical disciplines in a practical and useful way Clinical sections include the latest advances in prenatal screening a systems based presentation of the diagnosis and management of fetal malformations complete coverage of common and rare fetal conditions including growth restriction endocrine and platelet disorders early pregnancy loss and twins multiple pregnancy More focus on important basic science concepts such as maternofetal cell trafficking and the relevance to clinical management Fetal and Neonatal Physiology Richard A.
