Lymphocyte Adhesion Molecules:

Adhesion Molecules and Chemokines in Lymphocyte Trafficking Alf Hamann,1998-01-26 Summarizes the latest research in the field with particular emphasis on molecular mechanisms involved in lymphocyte traffic for scientists clinicians and students Subjects include the role of homing to mucosal tissue adhesion molecules and chemokines in regulation of lymphocyte and leukocyte migration roles of integrins in the interactions of lymphocytes with intestinal mucosa lymphocyte trafficking through the central nervous system and implications for tumor immunotherapy Includes bandw drawings Annotation copyrighted by Book News Inc Portland OR *Structure, Function, and Regulation of Molecules Involved in Leukocyte Adhesion* Peter E. Lipsky,Robert Rothlein,Takashi K. Kishimoto,Ronald B. Faanes,C.Wayne Smith,2012-12-06 Leukocyte adhesion molecules have been the subject of intense basic and preclinical research Results from clinical trials obtained sofar with antibodies directed towards these surface proteins offer promise for the prevention of graft rejection and effective treatment of acute and chronic inflammatory disease This volume presents a comprehensive review of contemporary research on the structure function and regulation of leukocyte adhesion molecules and their ligands from the molecular to the clinical level The blend of basic science and clinical applications presented in *Structure Function and Regulation of Molecules Involved in Leukocyte Adhesion* provides clear evidence of the biological importance of cell cell interactions and the many potential clinical dividends afforded by understanding the molecular basis of cell adhesion It will appeal to a broad range of readers in immunology and cell biology *Lymphocyte Adhesion Molecules* Yoji Shimizu,1993-01-01

Leukocyte Adhesion Molecules Timothy A. Springer,Donald C. Anderson,Alan S. Rosenthal,Robert Rothlein,2012-12-06 Leukocyte adhesion molecules promise to be highly effective as antigens in the antibody directed leucocyte elimination treatment prior to grafting or in cases of acute and chronic inflammatory disease This comprehensive review of contemporary research provides thorough discussions of the structure of these molecules their in vitro function and the role that they play in vivo as evidenced by results shown in inflammatory models where antibodies against these molecules are given to inhibit their function The blend of basic science and clinical applications provides clear evidence of the biological relevance of cell cell interactions and the many potential clinical dividends afforded by understanding the molecular basis of cell adhesion **Adhesion Molecules: Function and Inhibition** Klaus Ley,2007-10-27 This volume gives a comprehensive overview on the most relevant leukocyte and endothelial adhesion molecules The chapters are written by leaders in the field and focus on the biology structure function and regulation of adhesion molecules Currently approved adhesion molecule based therapies are reviewed and an outlook for future approaches is also provided The book is of interest to clinicians and scientists from immunology physiology cancer research rheumatology allergology infectious diseases gastroenterology pulmonology and cardiology *Adhesion Molecules and the Lung* P. A. Ward,1996-01-23 This state of the art reference outlines current knowledge of the structure transcriptional regulation and binding characteristics of vascular and leukocyte

adhesion molecules and their ligands delineating the nature of adhesion molecule interactions in lung morphogenesis and repair tumor metastasis and experimental models of inflammatory lung injury *Adhesion Molecules* Craig D. Wegner,1994-11-30 The consequences of diseases involving the immune system such as AIDS and chronic inflammatory diseases such as bronchial asthma rheumatoid arthritis and atherosclerosis now account for a considerable economic burden to governments worldwide In response there has been an enormous research effort investigating the basic mechanisms underlying such diseases and a tremendous drive to identify novel therapeutic applications for their prevention and treatment Though a plethora of immunological studies have been published in recent years little has been written about the implications of such research for drugs development As a consequence this area has not gained the prominence of other fields such as molecular pharmacology or neuropharmacology and a focal information source for the many pharmacologists interested in diseases of the immune system remains unpublished The Handbook of Immunopharmacology series provides such a source through the commissioning of a comprehensive collection of volumes on all aspects of immunopharmacology Editors have been sought after for each volume who are not only active in their respective areas of expertise but who also have a distinctly pharmacological bias to their research The series follows three main themes each represented by volumes on individual component topics The first covers each of the major cell types and classes of inflammatory mediators cells and mediators The second covers each of the major organ systems and the diseases involving the immune and inflammatory responses that can effect them systems The third covers different classes of drugs currently used to treat these diseases as well as those under development drugs This volume provides a comprehensive overview of the adhesion molecules processes and concepts that govern both inflammatory and infectious diseases and also deals in detail with the specific in vivo pathways involved The first chapter introduces some of the molecules that mediate leukocyte adhesion and ranges from their discovery using monoclonal antibodies and a congenital adhesion deficiency to their antagonism in preliminary clinical trials as novel therapeutics An in depth analysis of the structure distribution and function of the cell surface glycoproteins that regulates lymphocyte specific immune response granulocyte acute inflammatory response and metastatic cell malignant processes adhesions respectively is provided by the next three chapters Chapters 5 and 7 detail the molecular structure intracellular pathways specificity of carbohydrate interactions and signalling of the molecules that regulate leukocyte leukocyte and leukocyte mesenchymal cell interactions There follows an exploration into the contributions of specific molecules in inflammatory diseases in various organs from chapters 8 11 The concluding part is unique to this volume by reviewing the comparable and in some cases same cell surface molecules that mediate virus bacteria and parasite interactions with host cells The research is far from complete but *Adhesion Molecules* is extremely comprehensive and will be a valuable resource for many a year to come **Adhesion in Leukocyte Homing and Differentiation** Dominique Dunon,Charles R. Mackay,Beat A. Imhof,2012-12-06 This volume of Current Topics in Microbiology and Immunology was

planned in parallel with an EM BO workshop on cell cell Interactions in Leukocyte Homing and Differentiation held at the Basel Institute for Immunology in November 1992 and many of the workshop speakers have contributed to it Cell adhesion is one of the most dynamic fields of biological research and presented in this book is the current knowledge on the structure and function of the major families of cell adhesion molecules the integrins the selectins the immunoglobulin superfamily and CD44 Complex interactions between the members of these families mediate diverse adhesion functions including leukocyte leukocyte interactions lymphocyte homing inflammation and lymphocyte stromal cell interaction during hematopoiesis A great deal of emphasis is placed on the regulatory elements that control the expression and function of adhesion molecules Cytokines not only induce the expression of certain adhesion molecules but may also modify their functional status For instance the integrins exist in either an inactive nonfunctional form or an active functional form and a number of intracellular or extracellular stimuli modify integrin function This is particularly important during leukocyte binding to endothelium and transendothelial migration which proceeds through a cascade of adhesion events Although cell adhesion molecules play an important role in many processes this book concentrates on their role within the immune system A number of chapters discuss the migration of lymphocytes between hematopoietic organs such as the thymus lymph nodes Peyer s patches and spleen

Adhesion Molecules in Health and Disease Paul,1997-05-16 Provides an overview of the structure transcription regulation and binding characteristics of cellular adhesion molecules and their ligands in the maintenance of function immunological reactions and inflammatory processes with organ systems The text examines the role of adhesion molecules in biological processes such as morphogenesis blood coagulation tumour metastasis bone tissue remodelling and transplant rejection

Cellular and Molecular Mechanisms of Inflammation Charles G. Cochrane,Michael A. Gimbrone,2013-10-22 Cellular and Molecular Mechanisms of Inflammation Vascular Adhesion Molecules presents the study of the structure and function of constitutive and inducible cell surface structures which contribute to the temporal and spatial patterns and cellular selectivity of leukocyte vessel wall interactions The book addresses the rapidly expanding field of vascular adhesion molecules Contributed articles discuss SELECTINS a family of structurally related glycoproteins that contain lectin like domains that confer leukocyte selective adhesive functions which include ELAM 1 Endothelial Leukocyte Adhesion Molecule 1 GMP 140 PADGEM CD62 and LAM 1 gp 90m e l LEC CAM 1 LECAM 1 Other adhesive molecules such as CD44 and members of the immunoglobulin family of cell surface glycoproteins including ICAM 1 CD54 VCAM 1 INCAM 110 and LP AM 1 are also considered The text will be very useful to cytologists molecular biologists physiologists and pharmacologists

Vascular Adhesion Molecules and Inflammation Jeremy D. Pearson,2013-03-07 The book will provide an overview of the roles of vascular adhesion molecules in health and disease with chapters on their cell biology followed by chapters reviewing their importance in specific disease processes Vascular adhesion molecules are vital for the physiological processes of leukocyte trafficking and also critically involved in the enhanced leukocyte emigration that is a key feature of all

inflammatory and immune diseases The book is designed to provide up to date linked reviews of the subject suitable for postgraduate students entering the field or research workers from allied disciplines needing a modern overview

Leukocyte Recruitment, Endothelial Cell Adhesion Molecules, and Transcriptional Control Tucker Collins,2012-12-06 The localized attachment of circulating leukocytes to endothelium has been recognized as the cellular hallmark of the inflammatory response This adhesive interaction a necessary antecedent to the emigration of leukocytes from the blood into the tissues is mediated by vascular adhesion molecules Leukocyte Recruitment Endothelial Cell Adhesion Molecules and Transcriptional Control Insights for Drug Discovery outlines some of the cellular and molecular mechanisms of inflammation with contributions from top researchers This volume provides an overview of three of these endothelial adhesion molecules as examples of key mediators of leukocyte recruitment It reviews the structure and regulation of these cell surface proteins and focus on the rapidly expanding field of transcriptional regulation of these inducible proteins and closes with a discussion of drug discovery possibilities that target the regulation of leukocyte recruitment This book will be of interest for any researchers in academia or industry looking for an overview of leukocyte recruitment or novel approaches to drug discovery
